SMP1322 Series: Low Resistance, Plastic Packaged PIN Diodes

Applications

- High-performance wireless switch applications

Features

- Resistance: 0.8 Ω typical @ 1 mA
- Packages rated MSL1, 260 °C per JEDEC J-STD-020)

Skyworks Green™ products are compliant with all applicable legislation and are halogen-free. For additional information, refer to *Skyworks Definition of Green™*, document number SQ04-0074.

Description

The SMP1322 series of plastic packaged, surface mountable PIN diodes is designed for use in high volume switch applications from 10 MHz to more than 2 GHz. The ultra-low resistance of these diodes (1.5 Ω maximum at 1 mA and 0.5 Ω typical at 10 mA) makes the SMP1322 series particularly suited to low-loss PIN diode switches in battery operated circuits.

The SMP1322 series is available in a selection of plastic packages and a variety of configurations that include the ultra-low inductance SOT-143 (0.2 nH), a small footprint SC-79, and a miniature SC-70. The SMP1322-016 consists of two diodes in an SOT-143 package configured to enable insertion in a quarter-wave transmit/receive (T/R) switch with no crossover connections.

Table 1 describes the various packages and marking of the SMP1322 series.

The Pb-free symbol or "LF" in the part number denotes a lead-free, RoHS-compliant package unless otherwise noted as Green™. Tin/lead (Sn/Pb) packaging is not recommended for new designs.

Figure 1. SMP1322-016 Quarter-Wave T/R Switch

SMP1322-016 T/R Switch

The SMP1322-016 is a low-cost PIN diode unconnected pair specifically designed for low-current drain antenna T/R switches in hand-held wireless systems. In the specifically configured SOT-143 package (see Figure 1), the PIN diodes are oriented to enable connection as a $\lambda/4$ switch with no external crossover connections.

SMP1322-017 Low Inductance PIN Diode

The SMP1322-017 uses the SMP1322 PIN diode chip in a customized SOT-143 plastic package designed for high-isolation performance in a shunt connected switch (see Figure 2). Its effective inductance, based on a 3 GHz isolation, is less than 0.2 nH. This diode is designed to work effectively as a shunt element in SPDT switches, covering the wireless frequencies from 900 MHz to over 2 GHz.

Excellent performance is achieved when the SMP1322-017 is used in a $\lambda/4$ T/R switch with either the SMP1322-001 (SOT-23 package) or the SMP1322-011 (SOD-323 package) as the series connected PIN diode. Refer to Figure 7.

Table 2. SMP1322 Series Absolute Maximum Ratings

Parameter	Symbol	Minimum	Maximum	Units
Reverse voltage	V_R		50	V
Power dissipation @ 25 °C lead temperature	P_D		250	mW
Storage temperature	T_{STG}	-65	+150	°C
Operating temperature	T_A	-65	+150	°C

Note: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

CAUTION: Although this device is designed to be as robust as possible, Electrostatic Discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times. The SMP1322 series PIN diodes are Class 1B ESD devices.

Electrical and Mechanical Specifications

The absolute maximum ratings of the SMP1322 series are provided in Table 2. Electrical specifications are provided in Table 3. Resistance versus temperature measurements are provided in Table 4.

Typical performance characteristics of the SMP1322 series are illustrated in Figures 3 to 7. Package dimensions are shown in Figures 8 to 16 (even numbers), and tape and reel dimensions are provided in Figures 9 to 17 (odd numbers).

Package and Handling Information

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed.

Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

The SMP1322 series is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *Solder Reflow Information*, document number 200164.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.
