HS/HSL Supercapacitors
Hybrid cylindrical cells

Description
Eaton hybrid supercapacitors are high reliability, high power, ultra-high capacitance energy storage devices utilizing proprietary materials and processes. This combination of advanced technologies allows Eaton to offer a wide variety of capacitor solutions tailored to applications for backup power, pulse power and hybrid power systems.

They can be applied as the sole energy storage or in combination with batteries to optimize cost, life time and run time. System requirements can range from a few microwatts to hundreds of watts.

All products feature low ESR for high power density with environmentally friendly materials for a green power solution. Eaton supercapacitors are maintenance-free with design lifetimes up to 20 years* and operating temperatures down to -25 °C (HSL) and up to +85 °C (HS).

Features and benefits
- 3.8 V operating voltage for high energy
- Low ESR for high power density
- Up to 8 times energy density compared to standard supercapacitors
- Low self discharge ideal for use with batteries
- UL recognized (10, 25, and 150 F pending)

Applications
- Industrial backup/ride through
- Backup for storage servers
- Water and gas smart meters
- IoT energy storage
- Medical backup power/alarm
- Commercial trucks/containers asset tracking

Environmental compliance

Agency information

*Supercapacitor lifetimes vary based on charge voltage and temperature. See Eaton’s application guidelines or contact your local Eaton sales representative for more information on lifetime estimates.
Ratings

Capacitance  10 F to 220 F
Working voltage  3.8 V
Minimum working voltage  2.2 V
Surge voltage  4.0 V
Capacitance tolerance  -20% to +20% (+20 °C)
Operating temperature range  HS: -25 °C to +60 °C
HSL: -15 °C to +70 °C
Extended operating temperature range  HS: -15 °C to +85 °C (with linear voltage derating to 3.5 V @ +85 °C)

</table>

1. Capacitance, Equivalent series resistance (ESR) and Leakage current are measured according to IEC62391-1
2. Leakage current at +20 °C after 72 hour charge and hold.
3. Stored energy (mWh) = 0.5 x (Vrated -Vmin) x C x 1000
4. Peak power (W) = \( \frac{V^2}{4 \times ESR} \)
5. Pulse current for 1 second from full rate voltage to minimum rated voltage (A) = \( \frac{(V_{rated} - V_{min}) \times C}{1 + ESR \times C} \)
6. Continuous current with a 15 °C temperature rise.
7. Short circuit current is for safety information only. Do not use as operating current.
8. Cycling between rated voltage and 2.5 V, 3 second rest at +20 °C.

Note: Do not overvoltage, do not reverse polarity.

Safety and certifications

Agency information  UL810a
Shock and vibration  MIL-STD 202G
Environmental compliance  RoHS, REACH, lead free, halogen free
Warnings  Do not overvoltage, do not reverse polarity
Shipping  No restrictions, per UN 3508 with all cells <0.3 watt-hours
