

Cornell Dubilier Electronics, Inc.

September 24, 2021

To Our Valued Cornell Dubilier Distribution Partners,

The following is an update on Hybrid Polymer Surface Mount Lytic parts manufactured in Japan. This includes High Temperature, High Vibration and Low ESR series HZA, HZA-V, HZC & HZC-V.

Due to heavy increase in demand and supply shortage, our factory has announced that current orders cannot be supported at the original confirmed ship dates. All existing orders will be pushed out to December 2022. New orders placed will be acknowledged at a later date based on supply availability and demand.

Please note that during this time we will not be ordering safety stock for our HZA stock items. We will be concentrating on completing purchase orders placed for the time being.

We understand that this will be a challenging time and we appreciate your understanding and patience.

Ann Larson
Product Manager
