Website: <https://www.kyocera-avx.com>

18th February 2025

Dear Valued Customer

Kyocera AVX has been informed that two of our film materials (PEN and PET) that are used in the manufacturing of some of the Chip Film and a very limited number of Medium Power product ranges will be discontinued by our current supplier.

MYLAR specialty Films announced its intent to shut down production. The facility will continue to operate until Mid-2025.

KAVX has placed a last time buy to MYLAR to secure material to support our customers whilst we undergo the requalification of a new supplier.

KAVX is evaluating alternative suppliers of materials and will share our qualification details as they become available.

KAVX Series Impacted

Chip Film, CB**2, CB**7, CL**7
Medium Power, FFB*4, FFV34, FFVE4

Please reach out to your local KAVX salesperson if there are questions about this notification.

Best regards
