

A5M35TG140- TC

Airfast Power Amplifier Module

Rev. 2 — 19 October 2023

Product data sheet

The A5M35TG140- TC is a fully integrated Doherty power amplifier module designed for wireless infrastructure applications that demand high performance in the smallest footprint. Ideal for applications in massive MIMO systems, outdoor small cells and low power remote radio heads. The field-proven LDMOS and GaN on SiC power amplifiers are designed for TDD LTE and 5G systems.

3400–3600 MHz

- Typical LTE Performance: $P_{out} = 10.5 \text{ W Avg.}$, $V_{DC1} = V_{DP1} = 5 \text{ Vdc}$, $V_{DC2} = V_{DP2} = 48 \text{ Vdc}$, $1 \times 20 \text{ MHz LTE}$, Input Signal PAR = 8 dB @ 0.01% Probability on CCDF. ⁽¹⁾

Carrier Center Frequency	Gain (dB)	ACPR (dBc)	PAE (%)
3410 MHz	30.5	−27.6	46.7
3500 MHz	30.5	−30.2	47.5
3590 MHz	30.4	−32.8	47.9

1. All data measured with device soldered to NXP reference circuit.

Features

- 2-stage module solution that includes an LDMOS integrated circuit as a driver and a GaN final stage amplifier
- Advanced high performance in-package Doherty
- Thermal path is separated from electrical/solder connection path for enhanced thermal dissipation
- Fully matched (50 ohm input/output, DC blocked)
- Designed for low complexity digital linearization systems
- Reduced memory effects for improved linearized error vector magnitude

1. Part input and output matched to 50 ohms.
2. ATE is a socketed test environment.
3. Increase V_{GP2} (peaking side) until $I_{DQP2} = 40\text{ mA}$ current is attained, and then subtract 0.6 V for final V_{GP2} bias voltage.
4. All data measured in fixture with device soldered to NXP reference circuit.
5. Gain flatness = $\text{Max}(G(f_{Low} \text{ to } f_{High})) - \text{Min}(G(f_{Low} \text{ to } f_{High}))$

Correct Biasing Sequence

Turn ON:

Bias ON the GaN final stage first

1. Set gate voltage V_{GC2} and V_{GP2} to -5 V.
2. Set drain voltage V_{DC2} and V_{DP2} to nominal supply voltage ($+48$ V).
3. Increase V_{GP2} (peaking side) until $I_{DQP2} = 40$ mA current is attained, and then subtract 0.6 V for final V_{GP2} bias voltage.
4. Increase V_{GC2} (carrier side) until I_{DQC2} current is attained.

Bias ON the LDMOS driver stage second

5. Set drain voltage V_{DC1} and V_{DP1} to nominal supply voltage ($+5$ V).
6. Increase V_{GC1} (carrier side) until I_{DQC1} current is attained.
7. Increase V_{GP1} (peaking side) until I_{DQP1} current is attained.
8. Apply RF input power to desired level.

Turn OFF:

Bias OFF the GaN final stage first

1. Disable RF input power.
2. Adjust gate voltage V_{GC2} and V_{GP2} to -5 V.
3. Adjust drain voltage V_{DC2} and V_{DP2} to 0 V. Allow adequate time for drain voltage to reduce to 0 V from external drain capacitors.
4. Disable V_{GC2} and V_{GP2} .

Bias OFF the LDMOS driver stage second

5. Adjust gate voltage V_{GC1} and V_{GP1} to 0 V.
6. Adjust drain voltage V_{DC1} and V_{DP1} to 0 V.

Definitions

Draft — A draft status on a document indicates that the content is still under internal review and subject to formal approval, which may result in modifications or additions. NXP Semiconductors does not give any representations or warranties as to the accuracy or completeness of information included in a draft version of a document and shall have no liability for the consequences of use of such information.

Short data sheet — A short data sheet is an extract from a full data sheet with the same product type number(s) and title. A short data sheet is intended for quick reference only and should not be relied upon to contain detailed and full information. For detailed and full information see the relevant full data sheet, which is available on request via the local NXP Semiconductors sales office. In case of any inconsistency or conflict with the short data sheet, the full data sheet shall prevail.

Product specification — The information and data provided in a Product data sheet shall define the specification of the product as agreed between NXP Semiconductors and its customer, unless NXP Semiconductors and customer have explicitly agreed otherwise in writing. In no event however, shall an agreement be valid in which the NXP Semiconductors product is deemed to offer functions and qualities beyond those described in the Product data sheet.

Disclaimers

Limited warranty and liability — Information in this document is believed to be accurate and reliable. However, NXP Semiconductors does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information. NXP Semiconductors takes no responsibility for the content in this document if provided by an information source outside of NXP Semiconductors.

In no event shall NXP Semiconductors be liable for any indirect, incidental, punitive, special or consequential damages (including - without limitation - lost profits, lost savings, business interruption, costs related to the removal or replacement of any products or rework charges) whether or not such damages are based on tort (including negligence), warranty, breach of contract or any other legal theory.

Notwithstanding any damages that customer might incur for any reason whatsoever, NXP Semiconductors' aggregate and cumulative liability towards customer for the products described herein shall be limited in accordance with the Terms and conditions of commercial sale of NXP Semiconductors.

Right to make changes — NXP Semiconductors reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions, at any time and without notice. This document supersedes and replaces all information supplied prior to the publication hereof.

Suitability for use — NXP Semiconductors products are not designed, authorized or warranted to be suitable for use in life support, life- critical or safety- critical systems or equipment, nor in applications where failure or malfunction of an NXP Semiconductors product can reasonably be expected to result in personal injury, death or severe property or environmental damage. NXP Semiconductors and its suppliers accept no liability for inclusion and/or use of NXP Semiconductors products in such equipment or applications and therefore such inclusion and/or use is at the customer's own risk.

Applications — Applications that are described herein for any of these products are for illustrative purposes only. NXP Semiconductors makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Customers are responsible for the design and operation of their applications and products using NXP Semiconductors products, and NXP Semiconductors accepts no liability for any assistance with applications or customer product design. It is customer's sole responsibility to determine whether the NXP Semiconductors product is suitable and fit for the customer's applications and products planned, as well as for the planned application and use of customer's third party customer(s). Customers should provide appropriate design and operating safeguards to minimize the risks associated with their applications and products.

NXP Semiconductors does not accept any liability related to any default, damage, costs or problem which is based on any weakness or default in the customer's applications or products, or the application or use by customer's third party customer(s). Customer is responsible for doing all necessary testing for the customer's applications and products using NXP Semiconductors products in order to avoid a default of the applications and the products or of the application or use by customer's third party customer(s). NXP does not accept any liability in this respect.

Limiting values — Stress above one or more limiting values (as defined in the Absolute Maximum Ratings System of IEC 60134) will cause permanent damage to the device. Limiting values are stress ratings only and (proper) operation of the device at these or any other conditions above those given in the Recommended operating conditions section (if present) or the Characteristics sections of this document is not warranted. Constant or repeated exposure to limiting values will permanently and irreversibly affect the quality and reliability of the device.

Terms and conditions of commercial sale — NXP Semiconductors products are sold subject to the general terms and conditions of commercial sale, as published at <http://www.nxp.com/profile/terms>, unless otherwise agreed in a valid written individual agreement. In case an individual agreement is concluded only the terms and conditions of the respective agreement shall apply. NXP Semiconductors hereby expressly objects to applying the customer's general terms and conditions with regard to the purchase of NXP Semiconductors products by customer.

No offer to sell or license — Nothing in this document may be interpreted or construed as an offer to sell products that is open for acceptance or the grant, conveyance or implication of any license under any copyrights, patents or other industrial or intellectual property rights.

Export control — This document as well as the item(s) described herein may be subject to export control regulations. Export might require a prior authorization from competent authorities.

Suitability for use in non-automotive qualified products — Unless this document expressly states that this specific NXP Semiconductors product is automotive qualified, the product is not suitable for automotive use. It is neither qualified nor tested in accordance with automotive testing or application requirements. NXP Semiconductors accepts no liability for inclusion and/or use of non-automotive qualified products in automotive equipment or applications.

In the event that customer uses the product for design-in and use in automotive applications to automotive specifications and standards, customer (a) shall use the product without NXP Semiconductors' warranty of the product for such automotive applications, use and specifications, and (b) whenever customer uses the product for automotive applications beyond NXP Semiconductors' specifications such use shall be solely at customer's own risk, and (c) customer fully indemnifies NXP Semiconductors for any liability, damages or failed product claims resulting from customer design and use of the product for automotive applications beyond NXP Semiconductors' standard warranty and NXP Semiconductors' product specifications.

Translations — A non- English (translated) version of a document, including the legal information in that document, is for reference only. The English version shall prevail in case of any discrepancy between the translated and English versions.

Security — Customer understands that all NXP products may be subject to unidentified vulnerabilities or may support established security standards or specifications with known limitations. Customer is responsible for the design and operation of its applications and products throughout their lifecycles to reduce the effect of these vulnerabilities on customer's applications and products. Customer's responsibility also extends to other open and/or proprietary technologies supported by NXP products for use in customer's applications. NXP accepts no liability for any vulnerability. Customer should regularly check security updates from NXP and follow up appropriately.

Customer shall select products with security features that best meet rules, regulations, and standards of the intended application and make the ultimate design decisions regarding its products and is solely responsible for compliance with all legal, regulatory, and security related requirements concerning its products, regardless of any information or support that may be provided by NXP.

NXP has a Product Security Incident Response Team (PSIRT) (reachable at PSIRT@nxp.com) that manages the investigation, reporting, and solution release to security vulnerabilities of NXP products.
