GNSS Dual Feed Stacked Patch

Part No:
HP24510A

Description

Passive High Precision GNSS L1/L2 Stacked Patch Ceramic Antenna

Features:

Bands Covered:

- BeiDou (B1/B3)
- GPS/QZSS (L1/L2)
- GLONASS (G1/G2/G3)
- Galileo (E1/E5b)
- L Band Corrections

Dual pin, dual feed, 4-pin configuration

Dimensions: 45 x 45 x 10mm

RoHS & Reach Compliant

1. Introduction

The Taoglas HP24510A is a high performance, multi-band passive GNSS antenna that has been carefully designed to provide fantastic positional accuracy on the L1/L2 GNSS spectrum. It covers GPS/QZSS L1/L2, GLONASS G1/G2/G3, Galileo E1/E5b, BeiDou B1/B3, as well as SBAS (WAAS/EGNOS/GAGAN/SDCM/SNAS) as well as the L Band at 1525MHz.

Correct implementation of the HP24510A allows the user to achieve higher location accuracy, as well as stability of position tracking in urban environments. The stacked patch construction has excellent performance across the full bandwidth of the antenna.

Its design has an even gain across the hemisphere, giving excellent axial ratio, which in turn makes it extremely resilient to multipath rejection and provides excellent phase centre stability to ensure a location is correctly established in a navigation system.

Typical applications that benefit from high precision capabilities include:

- Autonomous Driving
- Precision Agriculture
- Telematics & Container / Asset Tracking
- Timing Accuracy Synchronization
- Precision Positioning for Robotics

The HP24510A is the latest embedded addition to Taoglas' product portfolio of high precision GNSS antennas. When used on the base and/or the rover as part of an RTK configuration, the HP24510A can achieve genuine cm-level accuracy with proven results.

Full integration guidelines are contained in Section 7 of this datasheet including the Taoglas HC125.A hybrid coupler that will be required for use for dual pin feed patch integrations.

Contact your regional Taoglas Customer Services team for more information on any of the products listed above or for support regarding integration.

2. Specification

GNSS Frequency Bands					
GPS	L1 1575.42 MHz	L2 1227.6 MHz	L5 1176.45 MHz

RELEASE

1. ALL MATERIAL MUST BE ROHS COMPLIANT.
2. USE THIS DRAWING TOGETHER WITH THE CORRESPONDING 3D CAD DATABASE FILE TO FULLY DESCRIBE THE PART.
3. THE CONNECTOR ORIENTATION HAS A FIXED POSITION TO THE ANTENNA AS PER DRAWING.
4. ** CRITICAL DIMENSIONS.
5. DOUBLE SIDED ADHESIVE:

	Name	Material	QTY
1	Top Patch (35x35x5mm)	Ceramic	1
2	Bottom Patch (45x45x5mm)	Ceramic	1
3	Double Sided Adhesive	NITTO 5015	1

6. Packaging

8pcs HP24510A Per Tray
Tray Dimensions – 255*144*12mm
Weight – 350g

24pcs HP24510A Per S Carton
Carton Dimensions – 263*154*96mm
Weight – 1Kg

96pcs HP24510A Per Large Carton
Large Carton Dimensions – 327*280*218mm
Weight – 4Kg

Pallet Dimensions:
1200mm*1000mm*1280mm
36 Cartons Per Pallet
9 Cartons Per Layer, 4 Layers

7. Antenna Integration Guide

7.1 Schematic and PIN Definition

The circuit symbol for the antenna is shown below. The antenna has 4 pins as indicated below. The L1 pin represents the higher GNSS frequency bands at 1525- 1610MHz and the L2 pin represents the lower GNSS frequency bands at 1215- 1254MHz.

Pin	Description
1	L1P1 (0°)
2	L1P2 (-90°)
3	L2P1 (0°)
4	L2P2 (-90°)

TAOGLAS_HP2450A
ANT1

7.2 Antenna Integration

The antenna should be placed at the center of the ground plane with a length and width of 70mm. Maintaining a square symmetric ground plane shape and symmetric environment around the antenna is critical to maintaining the excellent axial ratio and phase center performance shown in this datasheet. The opposite side of the PCB from the antenna may be used for device electronics and does not need to maintain symmetry.

Bottom side with solder mask

Bottom side without solder mask

7.3 PCB Layout

The footprint and clearance on the PCB must comply with the antenna specification. The PCB layout shown in the diagram below demonstrates the antenna footprint.

Top side

Bottom side

7.4 Evaluation Board

Top side

Bottom side

7.5 Evaluation Board Matching Circuit

Each patch element uses two orthogonal feeds that need to be combined in a hybrid coupler to ensure optimal axial ratio. Taoglas recommends our HC125.A, a high-performance hybrid coupler specifically engineered for use with our multi feed patches.

Two HC125.As are required for this antenna, one for the high GNSS band of operation (1525- 1610MHz) and another for the low GNSS band (1215- 1254MHz). These hybrid couplers should be placed close to the antenna pins and terminated correctly using 2x 49.9ohm resistors in parallel.

The output of each of the hybrid couplers can feed into separate paths for high and low band GNSS filtering and amplification.

Designator	Type	Value	Manufacturer	Manufacturer Part Number
R1, R2	Resistor	49.9 Ohms	Panasonic	ERJ-2RKF49R9X

7.6 Footprint

Changelog for the datasheet

SPE-22-8-183 – HP24510A

Revision: A (Original First Release)	
Date:	2023-03-06
Notes:	Initial Release
