Part No. ETH-LORA-M-AX-01
LoRa Module
868 / 915 MHz
Supports: Light Sensors, Home Lighting, Smart Door Locks, Water Meters, Parking Sensors, Smart City, Smart Retail

ETH-LORA-M-AX-01
LoRa Module

868 MHz / 915 MHz

KEY BENEFITS

Antenna Impedance Matching Capability
LoRa module embedding Impedance Matching chipset and algorithm to maximize the power transfer between the radio and the antenna

KYOCERA AVX Active Steering™ Ready
LoRa module embedding Ethertronics patented MCD algorithm and capable of driving KYOCERA AVX Active Steering™ antennas

APPLICATIONS
- Smart metering
- Smart grids
- Smart city
- Telemetry
- IoT

KYOCERA AVX's LoRa Module ETH-LORA-M-AX-01 is an SMT mounted cost efficient and low power radio module that operates in the unlicensed 868/915 MHz bands. It combines a LoRa™ transceiver SX1272 of Semtech Corporation [1] with Ethertronics chipset and technologies to maximize the link budget and RF performance. A sensitivity of up to -138 dBm and a maximum output power of +19 dBm results in a link budget of more than 156 dB. The increase in the link budget results in much longer range and robustness without the need for additional components.

Real-World Performance and Implementation
Designed for global market, pre-certified KYOCERA AVX's ETH-LORA-M-AX-01 helps reducing time consuming for radio development and related costs. Compared to other available modules in the market, ETH-LORA-M-AX-01 is embedded with proprietary Impedance Matching and Active Steering™ capabilities to optimize the RF performance on its own in order to achieve an excellent ultra-long range spread spectrum communication.
ETH-LORA-M-AX-01 is designed with power saving techniques so that the current consumption is low even when in communication.

Fast time-to-market is also possible with two types of demo boards (Active/Passive) equipped with high performance antennas provided by KYOCERA AVX.
The wide range functionalities of ETH-LORA-M-AX-01 can be tested conveniently.

Simplified Diagram
* UART interface is available now. SPI and I2C are coming soon with Firmware Update

LoRa Module specifications
KYOCERA AVX produces a wide variety of standard and custom antennas to meet user needs

Absolute Maximum Rating

Parameter	Min	Typ	Max	Unit
Supply Voltage (Vdd)	0	-	3.9	V
Storage Temperature	-40	-	85	ºC
Operating Temperature	-40	-	85	ºC
Max input Power	-	-	10	dBm
ESD	-	2000	-	V

Global Electrical Parameters

Parameter	Min	Typ	Max	Unit
Supply Voltage (Vdd)	2.5	3.0	3.6	V
Current Consumption Stop mode with RTC	-	1.8	-	µA
Current Consumption Sleep mode	-	3	-	mA
Current Consumption Run mode	-	9	-	mA
Current Consumption TX mode	-	100	-	mA
Current Consumption RX Mode	-	20	-	mA

RF Transmitter Characteristic

Parameter	Condition	Min	Typical	Max	Unit
Frequency		863	-	915	MHz
RF Output	868 MHz	-	14	-	dBm
	915 MHz	-	19	-	dBm
Modulation Techniques	LoRa™				
TX Frequency Variation vs. Temperature	-40 to +85°C	-	±10	-	kHz
TX Power Variation vs. Temperature		-	±0.5	-	dB

LoRa Module specifications
KYOCERA AVX produces a wide variety of standard and custom antennas to meet user needs

Module Interface Specifications

All I/Os are CMOS and TTL compliant.

Symbol	Parameter	Condition	Min	Max	Unit
V_{IL}	Input low level voltage	2.5 < VDD < 3.6	-	0.3VDD	
V_{IH}	Input high level voltage	2.5 < VDD < 3.6 Standard	0.45 VDD+0.38	-	
		2.5 < VDD < 3.6 Tolerant 5V	0.39 VDD+0.59	-	V
V_{OL}	Output low level voltage	2.7 V < VDD < 3.6 V Sink/source up to 8mA		0.4	
V_{OH}	Output high level voltage		VDD-0.4		
V_{OL}	Output low level voltage	2.7 V < VDD < 3.6 V Sink/source up to 4mA		0.45	
V_{OH}	Output high level voltage		VDD-0.45		

For the current firmware version, ETH-LORA-M-AX-01 supports UART to interface with the host using AT commands. The UART interface consists of only two lines RXD (input) and TXD (output) thus simplify the connection with the host. To save power consumption, this module support low power mode: Deep Sleep and Stop. In deep sleep mode, the module can wake up from UART command, while in stop mode the wake-up pin (P11) must be connected to the RX line of this module on the user's PCB, so that the character sent by user can wake up the module. Please refer to document about the integration guideline [2] and at command [3] for more details.

UART Interface setup:

Parameter	Default Value
Baud rate	115200
Data length	8 bits
Parity	None
Stop bit	1 bit
Flow control	None

KYOCERA AVX produces a wide variety of standard and custom antennas to meet user needs

Block diagram of the module used with a passive antenna

Hardware Architecture for LoRa Modules
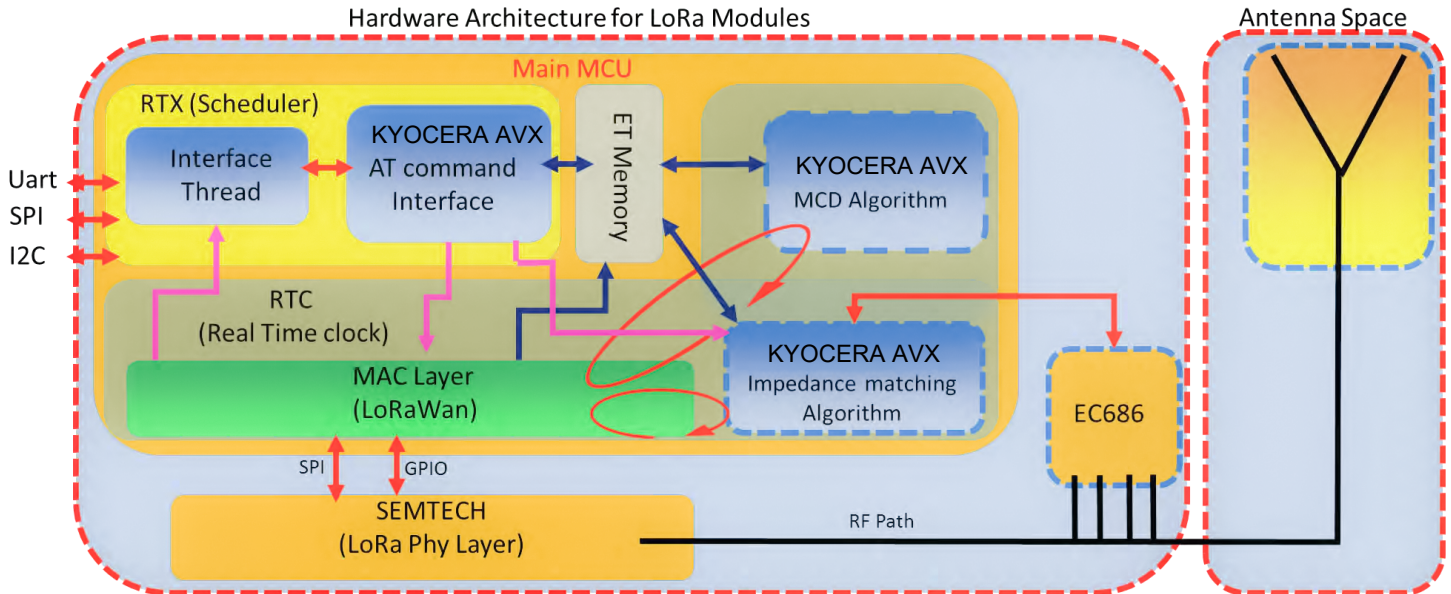

In this configuration, a proprietary impedance matching algorithm helps to maximize the power transfer to the antenna Please refer to the application note about the passive evaluation board for more details [4].

Block diagram of the module used with an KYOCERA AVX Active Steering™ antenna

Hardware Architecture for LoRa Modules

In this configuration, an active antenna with several radiation patterns must be used. In addition to the impedance matching algorithm, the MCD algorithm helps to choose the best radiation pattern regardless to the change of environment. Please refer to the application note about the active evaluation board for more details [5].

Pins description

| Pin Number	Pin Name	Pin Type	Description
1	GND	Supply	Ground Connection
2	SWCLK	Digital In/Out	Digital IO / JTCK / SWCLK
3	SWDIO	Digital In/Out	Digital IO / JTMS / SWDIO
4	VDD-SX	Supply	Supply Voltage for SX1272 part
5	VDD-SX	Supply	Supply Voltage for SX1272 part
6	GND	Supply	Ground Connection
7	nRESET	D In	nReset, internally pulled-up, internally filtered with capacitor
8	P5	Digital In/Out	Digital IO / USART1 CTS / MIPI DATA
9	P6	Digital In/Out	Digital IO / USART1 RTS / MIPI CLK
10	VDD-ST	Supply	Supply Voltage for ST part
11	GND	Supply	Ground Connection
12	P7	Digital In/Out	Digital IO / SPI2 MISO
13	P8	Digital In/Out	Digital IO / SPI2 MOSI / MIPI DATA
14	P9	Digital In/Out	Digital IO / SPI2 CLK / MIPI CLK
15	P10	Digital In/Out	Digital IO / SPI2 NSS / MIPI VIO
16	GND	Supply	Ground Connection
17	VDD-ST	Supply	Supply Voltage for ST part
18	RxD	Digital In/Out	Digital IO / USART1 RX
19	TxD	Digital In/Out	Digital IO / USART1 TX / MIPI VIO
20	P11	Digital In/Out	Digital IO/ Stop Mode Wake Up
21	P12	Digital In/Out	Digital IO / I2C1-SCL / Interface Selection
22	GND	Supply	Ground Connection
23	P13	Digital In/Out	Digital IO / I2C1-SDA / Interface Selection
24	P14	Digital In/Out	Digital IO / AS VDD
25	NC	NC	
26	BOOT	D In	Bootloader Pin 0, internally pulled down
27	GND	Supply	Ground Connection
28	NC	NC	
29	NC	NC	
30	GND	Supply	Ground Connection
31	RF	RF In/Out	LoRa Antenna Port
32,33,34,35	GND	Supply	Ground Connection

Programming Interface

ETH-LORA-M-AX-01 is already pre-programmed with latest firmware available on the production date. Nonetheless, this module supports an In Application Programming (IAP) to perform a Firmware Upgrade. If in the future, the firmware is updated, user can download the firmware on the website and update the module using UART interface.

Please refer to application note about upgrading the module Firmware for more details [6].

Integration guide (UART Interface Application)
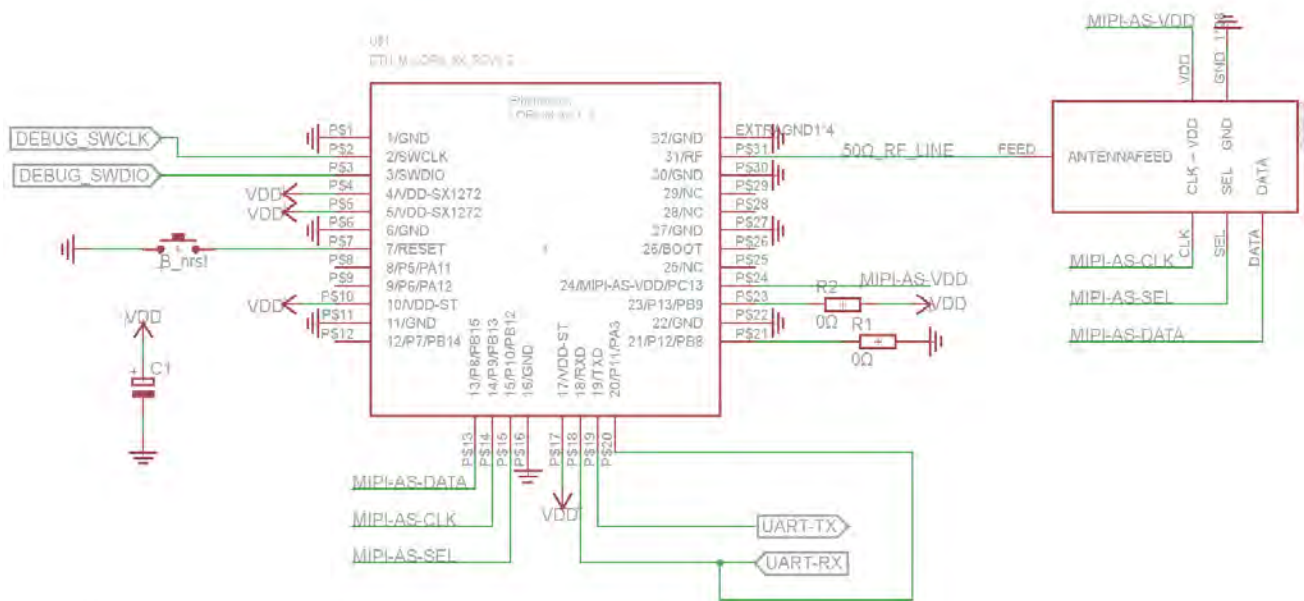

Schematic Part Name	Manufacturer	Manufacturer Part Number	Description
U$1	KYOCERA AVX	LORA-M-AX-01	Lora Module V1.2
U$3	KYOCERA AVX	B2	Active Steering Antenna (MIPI Interface)
B_nrst	Rafi	1.14002.1010000	SWITCH PUSH SPST-NO 0.1A 35V
R1	Panasonic	ERJ-S020R00X	Thick Film Resistors - SMD 0402 Zero ohm Jumper 0.05ohm AEC-Q200
R2	Panasonic	ERJ-S020R00X	Thick Film Resistors - SMD 0402 Zero ohm Jumper 0.05ohm AEC-Q200

This is a typical UART interface application schematic for ETH-LORA-M-AX-01. UART-RX signal is also connected to P11 in order to wake up the module when using the stop mode in low power mode.
Please refer to document about the integration guideline for more details [2].
