Description

The MABT-011001 is a wideband high current Bias T. It functions as an RF-DC de-coupling network as well as the DC return and contains a series DC blocking capacitor and shunt DC decoupling capacitor on the DC feed. Providing a high performance robust solution suitable for use on a standard SMT production line.

Ideal Biasing solution for Wideband Amplifier and Switch Circuits.

Pin Names³

Pin #	Function	Pin #	Function
1	RF _{IN}	3	DC & RF _{OUT}
2	DC	Paddle	GND ⁴

3. MACOM recommends connecting unused package pins to ground.

4. The exposed pad centered on the package bottom must be connected to RF, DC and thermal ground.
