Assembly

If possible, use copper filled vias underneath pin 3 for better thermals; otherwise, use vias that are plated through, filled and plated over.

Solder mask should provide a 60 μm clearance between copper pad and solder mask underneath package and 125 μm clearance on outside edges of package. Rounded package pads should have matching rounded solder mask openings.

Use circles or squares for the thermal land stencil such that there is only 50% to 80% solder paste coverage.
