Features and Benefits

Single-chip SOC Providing Optimized BOM Cost and Board Area Design

- Integrated dual SHARC+ floating-point DSP cores and ARM® Cortex®-A5 processor
- Scalable performance and features
- Lower cost derivative to the successful ADSP-SC58x family

Class leading low power floating-pt DSP Performance at under 2W

- 5.4GFLOPs, 1.8GMACS Floating-pt SHARC+ DSP performance (2x 450MHz)
- Enabling 105°C environments and reduced heat-sinks and no fans for increased reliability & robustness

Integrated & optimized low power connectivity engine

- Industry standard ARM® Cortex®-A5 (7

[ADSP-SC57x and ADSP-2157x Series: Summary and Comparison](#)

Product Details

The ADSP-SC57x/2157x processors are part of the new, high-performance, power-efficient, real-time series that delivers using two enhanced SHARC+® cores and advanced DSP accelerators (FIR, IIR). The ADSP-SC57x/ ADSP-2157x series consume less than 2 watts, making the new processor line-up more than 5x more power efficient than previous SHARC products and comparable to the ADSP-SC58x/ 2158x SHARC products. This advantage provides industry leading digital signal processing performance for applications where thermal management sets the limit for power consumption, or where the higher costs and lower reliability of fans cannot be tolerated. Applications include automotive, consumer and professional audio, multi-axis motor control, and energy... [Show More..](#)

Product Lifecycle

 **Pre-Release**

This product is new and engineering validation may still be underway. Quantities may be limited and design specifications may change while we ready the product for release to production.

Software & Systems Requirements

Middleware

Micrium μ C/FS

The Micrium μ C/FS™ File System for CrossCore® Embedded Studio is a compact, reliable, high-performance file system which is the result of collaboration between Analog Devices and Micrium.

Lightweight TCP/IP (lwIP) Stack

The Lightweight TCP/IP (lwIP) Stack for CrossCore Embedded Studio is an implementation of this widely accepted TCP/IP stack for embedded platforms supporting most of the networking protocols in the TCP/IP suite.

Micrium μ C/USB Device

μ C/USB Device™ Stack for CrossCore® Embedded Studio

Micrium μ C/OS-III

The Micrium μ C/OS-III® Real-Time Kernel for CrossCore Embedded Studio (CCES) provides a user-friendly programming environment for μ C/OS-III applications running on Blackfin and SHARC processors.

Micrium μ C/OS-II

The Micrium μ C/OS-II® Real-Time Kernel for CrossCore Embedded Studio (CCES) provides a user-friendly programming environment for μ C/OS-II applications running on Blackfin and SHARC processors.

Design Resources

ADI has always placed the highest emphasis on delivering products that meet the maximum levels of quality and reliability. We achieve this by incorporating quality and reliability checks in every scope of product and process design, and in the manufacturing process as well. "Zero defects" for shipped products is always our goal.
