[Buy Now](#)

The QT6 Xplained Pro is a QTouch Surface extension board for Xplained Pro boards that demonstrates the Peripheral Touch Controller (PTC) as a high performance touch-surface controller. The PTC controller uses very little power and resources from the MCU, which makes it easy to integrate touch surface support to your main project.

Key Features

- 100 nodes with 5mm node pitch
- 50mm x 50mm surface area
- Evaluation kit for [QTouch Surface](#)
