High flexible and rigid cable assemblies	62
RF cables	72
RF connectors, adaptors, and resistive components	76
 Services and support	 90

Solutions and services for Test+Measurement

The best measurement setup is only as good as its weakest link. To obtain reliable and reproduceable measurement results, particular care must be taken in selecting the components required for the measurement setup.

HUBER+SUHNER's extensive range of high quality components are matched to the various needs in the field of test and measurement. All these products are distinguished by their high performance and stable characteristics - the result of years of experience in the development and production of radio frequency components.

Test+Measurement equipment

Electronic test equipment has the main function of creating signals and capturing responses from electronic devices under test (DUT). In this way, the proper operation of the DUT can be proven and faults in the devices performance can be detected and corrected.

The HUBER+SUHNER cost-effective product line-up for your test equipment always helps you to achieve highest precision and reliability. Whether you're developing or producing equipment to test active or passive devices, the right mix of quality, performance and reliability gives you an edge.

Applications

- Network analyzers
- PXI
- Oscilloscopes
- Handhelds

Semi-rigid

Semi-rigid cables are available as formed assemblies. The cable provides greatly extended environmental parameters. It exhibits highly favourable electrical characteristics, particularly an impedance tolerance as low as 0.5Ω for a 0.141" diameter cable, with nominal impedance of 50Ω .

Sucoform

Sucoform cables are applicable up to 40 GHz and have distinct mechanical advantages in comparison to semi-rigid cables. A tin-soaked copper braid for the outer conductor gives them outstanding hand-formability and therefore combines the excellent characteristics of semi-rigid cables with those of flexible coaxial cables.

Minibend

The minibend family is a truly flexible, high performance alternative to semi-rigid cable assemblies, that eliminate the need for predefined custom lengths and bend configurations. The minibend family provides you with a preassembled and tested high performance, cost-effective alternative in a variety of standard lengths and connector configurations.

- Solderless, bend-to-the-end junction
- Triple shielded for high isolation
- Eliminates need for costly right angle connectors
- Direct replacement for semi-rigid cables

Minibend CT

The minibend CTR family of cable assemblies combines the industry-renowned flexibility of bend-to-the-end connector termination technology with industry leading phase vs. temperature performance to create a stable, reliable, MIL-DTL-17 qualified interconnect solution to satisfy an endless range of customer applications where phase stability is key.

- Increased system accuracy over temperature change
- More reliable connectors due to solderless junctions

RF cables – Performance line

The HUBER+SUHNER "Performance line" contains RG and Enviroflex RF cables, which are designed for high performance applications. While the RG series provides a wide temperature range, Enviroflex offers a halogen free and environmental friendly alternative. The product line is available with a comprehensive connector portfolio which results in individual and flexible cable assembly solutions.

- Wide temperature range
- High performance
- RG standard

Connectors

HUBER+SUHNER is a leading global provider of radio-frequency connectors for the transmission of analogue and digital signals and has many years of experience in the engineering and production of coaxial connectors. In addition to a broad selection of standard connectors for a wide range of different applications, customer-specific solutions are also developed and manufactured.

Board-to-board connectors: MBX, MMBX

HUBER+SUHNER MBX and MMBX connectors are specifically developed for board-to-board and board-to-module RF interconnections. The outstanding mechanical design allows for mechanical misalignment in radial and axial directions while still maintaining excellent electrical performance.

- Lower total cost of ownership
- Miniaturization
- Higher output power
- Reliable connection

Series MMPX – 65 GHz/80 Gbps snap-on connectors

The MMPX snap-on connector family is the most ideal coaxial-to-PCB system solution for operating frequencies up to 65 GHz and data rates up to 80 Gbps. The comprehensive product range consists of cable connectors and assemblies. PCB connectors and adaptors to open standards are available as well. MMPX connectors feature excellent electrical performance at smallest mechanical dimensions. The broadband characteristics, small size and outstanding performance permit new solutions for applications in numerous markets such as high speed digital and radio frequency testing (60 GHz WPAN), industrial, mobile communications, space and defense.

SMPM-T

The SMPM-T is the smallest threaded open source connector on the market. Its unique and innovative combination of a MIL-STD-348 SMPM female interface connector with a retractable threaded nut provides an integrated solution that offers unprecedented electrical and mechanical performance. The SMPM-T handles high density requirements with a connector centerline-to-centerline spacing of just 5 mm (0.20 in) while offering unmatched electrical stability at frequencies up to 65 GHz in even the harshest operating environments (> 12 000 shock).

Adaptors

HUBER+SUHNER manufactures a wide range of adaptors to realise transitions from one interface style to another. Our RF adaptor assortment covers all commercially available RF interfaces, gender configurations, frequency requirement, and return loss specification. Any RF coaxial adaptor can be modified to fit specific applications.

System solutions

HUBER+SUHNER Radio Frequency is committed to delivering more value to our customers. To this end, we have created a new organisation focused on the development and production of RF systems. The RF systems business organisation is quickly developing into a hub for hybrid assemblies, multi-product configurations, and black box solutions (especially RF-over-Fiber). The sub-systems area, which includes the hybrid assemblies and multi-product configurations, is proving to add significant value for our customers. HUBER+SUHNER is now able to provide complete models, which simplifies both the customer's supply chain and the system integration activities.

Lab testing

Any research and development, test, or quality assurance department that works with RF signals is relying on precise and repeatable measurements. Since the quality of a test configuration is only as strong as the weakest link, HUBER+SUHNER offers a wide range of supreme flexible and rugged cable assemblies with excellent amplitude and phase stability and high-precision connectors, as well as terminations and adaptors. These state of the art reliability guarantees reduced equipment downtime, which is an economical advantage for testing in laboratories.

SUCOFLEX® 500

When it comes to test and measurement, SUCOFLEX 500 assemblies guarantee the highest level of satisfaction

- Torque, crush and kink resistant
- Precise and repeatable measurements
- Long service life
- Reduce total cost of test with durable, reliable performance
- Increased test and measurement efficiency saving costs due to reduced calibration intervals

SUCOFLEX® 100

SUCOFLEX 100 series flexible microwave cable assemblies offer superior electrical and mechanical performance for static and dynamic applications. This series provides optimal performance up to 50 GHz, where stringent electrical requirements – in particular stability and low loss – are important.

- Maintaining stable electrical characteristics when exposed to bending and temperature
- Can be provided with various ruggedisations to protect the assembly against different environmental influences
- Mechanical and climate resistance properties surpass those of standard flexible cables

Sucotest 18 – the highest standard of measurement

Sucotest 18 is ideal for daily use in component and assembly shops, test labs and high speed digital testing applications. Sucotest 18A armoured test assemblies are ideal for testing wireless communication infrastructures and outdoor use.

- Low insertion loss
- Exceptional loss stability
- Excellent return loss
- No spring back effect

Precision adaptors

HUBER+SUHNER manufactures a wide range of standard and high-performance adaptors that are ideal for lab and production test applications where measurement accuracy, repeatability, and optimum electrical performance are critical.

- Precision interfaces
- Excellent electrical performance
- Premium base materials and platings
- For precision laboratory measurements
- High repeatability and accuracy

Attenuators, terminations and DC blocks

The comprehensive range of high-quality radio frequency attenuators, terminations, and DC blocks is based around the varying needs of test and measurement applications.

Factory testing

In a factory environment the improvement of the overall efficiency in the supply chain is the main criteria. High repeatability, longer service life, and efficient usage are features of our HUBER+SUHNER factory test portfolio, which helps to decrease total operating costs through reduced replacement, retesting, and recalibration.

TL-8A

HUBER+SUHNER TL-8A assemblies are designed for testing components or equipment up to 8 GHz with network analyzers (NA). This economical assembly family is made with a PE foamed double screened cable and protected with an armouring using a moulded cable entry. The excellent electrical performance combined with a high mechanical endurance is ideal for the use in test labs and in operations.

- High mechanical endurance
- Excellent insertion and return loss
- High mating cycle
- N connector with quick-lock nut

Sucotest 18 – the highest standard of measurement

Sucotest 18 is ideal for daily use in component and assembly shops, test labs, and high speed digital testing applications. Sucotest 18A armoured test assemblies are ideal for testing wireless communication infrastructures and outdoor use.

Sucotest 18 test assemblies

- Low insertion loss
- Exceptional loss stability
- Excellent return loss

Sucotest 18 (A) armoured test assemblies

- Excellent durability
- Excellent return loss
- High flexibility

Sucotest 26/Sucotest 40

Sucotest 26/Sucotest 40 cable assemblies are high frequency, low loss cables which are five shielded for superior RF isolation. The internal stainless steel outer braid provides higher pull strength and lighter weight than RG style cable. Nomex and polyolefin jackets are also available:

- Amplitude stability: < 0.1 dB at 26.5 GHz for 200 flexes 180° in one plane around a 2" radius, 0.2 dB with 600 flexes
- Five shields for super RF shielding (–120 dB)
- Steel outer shield for high pull strength

SUCOFLEX 100

SUCOFLEX 100 series flexible microwave cable assemblies offer superior electrical and mechanical performance for static and dynamic applications. This series provides optimal performance up to 50 GHz, where stringent electrical requirements – in particular stability and low loss – are important.

- Maintaining stable electrical characteristics when exposed to bending and temperature
- Can be provided with various ruggedisations to protect the assembly against different environmental influences
- Mechanical and climate resistance properties surpass those of standard flexible cables

Standard and precision adaptors

HUBER+SUHNER manufactures a wide range of standard and high-performance adaptors that are ideal for lab and production test applications, where measurement accuracy, repeatability and optimum electrical performance are critical.

- De-embedding
- Phase matched adaptors

Network testing

Passive IM field and lab testing

In modern RF wireless installations the network performance has become more crucial than ever before. All failures related to component, wireless interference or incorrect installation or maintenance will need to be averted before they occur in order to deliver the ultimate subscriber experience and at the same time avoid costly downtime of your networks and time-consuming work to fix the problem by your field techs.

HUBER+SUHNER has a wide range of products to help you perform in-advance cable and antenna analysis, run interference detection test (distance to failure), monitor and verify network signals and run transmitter/receiver tests.

Sucotest 18 – the highest standard of measurement

Sucotest 18 is ideal for daily use in component and assembly shops, test labs, and high speed digital testing applications. Sucotest 18A armoured test assemblies are ideal for testing wireless communication infrastructures and outdoor use.

TL-P – high flexible PIM test lead

HUBER+SUHNER TL-P assemblies are designed for indoor and outdoor applications where passive intermodulation (PIM) and return loss (RL) has to be tested. Its excellent PIM and RL performance makes this product line unique on the market and a perfect component for the use in Test+Measurement applications. TL-P is based on a flexible cable which is optimized up to 4 GHz and protected with a steel armouring. The robust design is completed with a moulded protection between connector and cable.

Low passive intermodulation adaptors

These low intermodulation adaptors have been specifically developed for applications in intermodulation test set-ups. They are made of non magnetic materials using a minimum number of piece parts to minimize intermodulation sources.

- Outstanding intermodulation performance
- Non magnetic materials
- Excellent electrical contacts
- Reliable and repeatable intermodulation measurements

Low passive intermodulation load

HUBER+SUHNER offers high performance intermodulation loads for test+measurement in multicarrier high RF power radio applications. They are primarily used to terminate transmission lines in PIM sensitive applications such as an open port of a hybrid coupler. These intermodulation loads are made by using high performance material, especially selected to obtain the best PIM and VSWR results.

- High stability/high repeatability
- Outstanding low PIM levels (better than -160 dBC)
- Reliable and repeatable intermodulation measurements

Passive intermodulation standards

Intermodulation standards are special adaptors which generates intermodulation products of a certain preset level. They are used to verify intermodulation test benches for an instant and/or long-term level stability monitoring. If the third-order intermodulation value, displayed by the test instrument, deviates from the specified value of the intermod standard, it indicates a general measurement uncertainty which may be caused by the test setup rooting in one or several component or interconnection PIM sources.

- High repeatability
- Each item delivered with measurement protocol
- Verification traceability via serial number

Power measurement

The quest for ever-higher energy efficiency is placing new demands on designers and test instruments requiring them to run specialized, complex and time consuming power measurements. But these measurements are essential to optimize the product design and comply with commercial, wireless, automotive, and MIL standards. Since RF and microwave signals must be made part of the product design and test, HUBER+SUHNER offers unique cable assemblies, terminations and attenuators portfolio to make these measurements as easy, fast and accurate as possible.

Fixed attenuators

RF attenuators are used to reduce the power of a signal without causing distortion of its waveform. They are used in many test+measurement and communication applications.

- Power adjuster between different channels or inline subsystems
- As a protection for the input of the test equipment to reduce threatening RF power
- To improve the impedance matching between subsystems or to the test instrumentation

Coaxial terminators

Terminators (also called RF loads or dummy loads) are applied to an open end of a transmission line, e.g. an RF port, to prevent the back-reflection of an RF signal. They are used in a large variety of test+measurement, defense, and communication applications

Power test leads

The test lead RG393/U is designed for low attenuation and high stability. This test lead is the ideal connection between the device under test and the measurement unit during power measurements.

Boa-flex II – 32071

astro-boa-flex II cables utilize a microporous PTFE dielectric for low loss with minimal phase change due to temperature changes and flexure. Typical velocity is 77 % of the speed of light. The outer conductor is a helical wrapped silver-plated copper (SPC) foil covered with a SPC round braid.

- Low density PTFE for superior electrical performance
- Exceptional power handling capability
- Exceptional phase and I.L. stability with flexure
- Preferred for phase matching and tracking applications
- Operating temperature –65 to 200 °C

Thermal vacuum measurement

HUBER+SUHNER emerged in space as a partner for passive microwave components that can be used for satellite testing in clean rooms as well as in thermal-vacuum environment. These components support the satellite during the entire trial period prior to launch. The comprehensive product range is optimally matched to the needs of the space customers. From the comprehensive range of TVAC components in the vacuum chamber of the hermetic adaptors to the test assemblies in the clean room, the procurement process is simplified by offering "one stop shopping". This is true both for low power and high power applications.

The power handling capability of all assemblies is determined using simulations which are verified with real power tests and therefore performance predictions are accurate.

Our thermal vacuum assemblies pass thermal cycling qualification to guarantee stable interface dimensions. By request, our cable assemblies can be produced in clean room environment and stabilisation thermal cycling can be applied.

TVAC cable assemblies

They are exposed to vacuum and extreme temperature variations. One important requirement is that the assemblies used within the vacuum chamber must meet the ECSS-Q-ST-70-02 C and NASA reference publication 1124 outgassing standard to prevent contamination of the chamber or equipment by solvents evaporating from certain materials. To prevent the assemblies becoming stressed and to ensure an extended service life, HUBER+SUHNER TVAC connectors contain venting holes that allow an unimpeded flow of air into and out of the components during the pressurisation/depressurisation cycles.

Hermetic adaptors

HUBER+SUHNER offers a wide array of hermetic feed-thru style adaptors that offer both in-series and between series interface solutions for TVAC testing applications. The hermeticity is provided by a glass-fired seal within the adaptor body. The glass material is selected to provide the best electrical performance while also matching the coefficient of thermal expansion of the surrounding body and contact as closely as possible to prevent any loss of hermeticity. All of the hermetic adaptors are 100 % tested for hermeticity in accordance with ASTM E-498, MIL-STD-202, and MIL-STD-883.

High performance cable assemblies

The SUCOFLEX microwave assembly family has been specifically developed for Test+Measurement and high performance applications where low insertion loss, phase stability vs. temperature/flexure, return loss, and mechanical stability are of the utmost importance. The SUCOFLEX family meets these challenges and provides the opportunity to design with the highest performance microwave cable in its class.

Multipaction free assemblies

Boa-flex II – 32071 high power multipaction free cables utilise a microporous PTFE dielectric for low loss with minimal phase change due to temperature changes and flexure. In order to avoid the multipactor effect that causes RF signal loss/distortion or component-damaging heat build-up, connectors and cable assemblies are designed against air-gaps by utilizing interference fits with tight machine tolerances. Connectors are constructed with non-magnetic, black oxide-coated beryllium-copper bodies capable of excellent heat dissipation under vacuum. Typical velocity is 77 % of the speed of light. All offer very low loss and are extremely stable with flexure.

Passive components

The comprehensive range of high-quality radio frequency components is based around the varying needs of Test+Measurement. The components are compatible with one another and have stable characteristics of a very high quality. This high quality level results from many years of experience in the development and production of radio frequency components. Multipaction free high power adaptor solutions are available.

High speed digital

HUBER+SUHNER is a leading international manufacturer and supplier of components and systems for electrical and optical connectivity. HUBER+SUHNER unites technical expertise in radio frequency technology, fiber optics and low frequency under one roof and offers a high-quality product range for the communication, transport and industrial markets.

HUBER+SUHNER is offering a broad range of high end RF test components and assemblies, developed and optimised for high speed digital testing. We stand for highest density, lowest loss and highest performance coaxial-to-PCB transitions and cabling solutions. Our solutions include extensive technical support, libraries of 3D files, electrical modelling data and customer specific optimised footprints.

MMPX

- True 65 GHz/80 Gbps coaxial-to-PCB transition
- Broadband characteristics from DC to 65 GHz
- Excellent return loss
- Excellent shielding, low cross talk
- Via-in-pad capable
- 5.08 mm pitch (0.2 inch)
- Mechanically robust design
- Extensive technical support

MXP18/MXP40/MXP50

- Operating range at up to 50 Gbps/50 GHz
- Standard absolute phase matching down to ± 2 ps
- Highest density – lowest loss
- Slide-on mating – no threading
- Highly flexible and ultra stable Multiflex cable
- Extensive technical support

SUCOFLEX 100

SUCOFLEX 100 series flexible microwave cable assemblies offer superior electrical and mechanical performance for static and dynamic applications. This series provides optimal performance up to 50 GHz, where stringent electrical requirements – in particular stability and low loss – are important.

- Maintaining stable electrical characteristics when exposed to bending and temperature
- Can be provided with various ruggedisations to protect the assembly against different environmental influences
- Mechanical and climate resistance properties surpass those of standard flexible cables

SMPPM-T/SMPPM/SMP

The SMPPM-T is the smallest threaded open source connector on the market and offers unprecedented electrical and mechanical performance. The SMPPM-T handles high density requirements with a connector centerline-to-centerline spacing of just 5 mm (0.20 inch) while offering unmatched electrical stability at frequencies up to 65 GHz in even the harshest operating environments.

- No electrical length and phase variation under vibration, shock, or any other kind of movement
- The smallest threaded interface available that complies with MIL-STD-348
- A mated SMPPM-T connector pair offers a 75 % size and 85 % mass reduction in comparison to a SMA connector solution

Services and support

HUBER+SUHNER is committed to delivering more value to our customers. To this end, we have created a new organisation focused on the development and production of RF systems. The RF systems business organisation is quickly evolving into a hub for hybrid assemblies, multi-product configurations, and black box solutions (especially RF-over-Fiber). The sub-systems area, which includes the hybrid assemblies and multi-product configurations, is adding significant value for our customers. HUBER+SUHNER is now able to provide complete models, which simplifies both the customer's supply chain, as well as the system integration activities.

System solutions – HUBER+SUHNER offers design support which goes beyond the development of a connector, a cable or a cable assembly. We have a dedicated team in house which, in close cooperation with the customer, can provide:

- Systems: A "black box" solution for specific applications or a solution, which, via a design service, configures/links HUBER+SUHNER and 3rd party products.
- Sub-systems: A product, which is designed by the customer, but engineered and produced by HUBER+SUHNER at an international location that is appropriate for the customer. These products may contain 3rd party content.
- Services: A service, whereby we provide kitting and other value-adding services, such as painted antennas, to customers in order to simplify the integration into a system or sub-system.

Customised connector solutions

While HUBER+SUHNER offers an extensive product line of connectors and adaptors, we also understand that some application needs are unique. HUBER+SUHNER offers custom-engineered solutions through innovative design, using state-of-the-art development tools. These powerful tools allow us to demonstrate product feasibility, including prototyping, in a short amount of time. Our in-house type testing capabilities will further prove the design through intensive verification tests according to MIL standards or your specific requirements.

Online support tools

HUBER+SUHNER offers a set of online tools which assists you in finding the right product, calculating the electrical performance of specific cable assembly configurations, and inquiring about the desired products once defined.

- Dynamic Product Finder
- RF Assembly Calculator
- RF Assembly Configurator (Request For Quotation)

Optimized connector/PCB solutions

Only by using an optimized footprint can the performance of the connectors be unleashed. HUBER+SUHNER offers optimized connector/board solutions:

- 3D field simulation
- Optimized footprints (incl. connector) as gerber files

Repair service

HUBER+SUHNER is offering a retermination service for the professional replacement of defective channels. Your HUBER+SUHNER representative will guide you if you are in need of a repair and want to benefit from this opportunity.

Measurement accessories

Additional tools and accessories will allow extended possible applications for the HUBER+SUHNER RF connectors, like

- Precision torque wrench
- MMPX – decoupling tools

Cable/connector portfolio – quick assembly selection matrix

Qualified, high performance microwave cable assemblies

The flexible SUCOFLEX® series microwave cable assemblies offer superior electrical and mechanical performance for static and dynamic applications. This series is a high-end product designed to provide optimal performance up to 50 GHz, where stringent electrical requirements, in particular electrical stability and low loss, are important. Ideally suited for test and measurement applications and defense systems. Additional lightweight high end versions are designed to meet the stringent needs of space flights systems (i. e. satellites) and aerospace systems (aircraft, helicopters, missiles), which are subject to extremely severe operating conditions. SUCOFLEX is only available as assembly. Order with confidence.

SUCOFLEX® series

What are SUCOFLEX assemblies?

SUCOFLEX are flexible microwave cable assemblies offering better transmission characteristics than semi-rigid cables.

SUCOFLEX comprises an entire system of optimally matched components such as:

- Microwave cables
- Connectors
- Ruggedisations
- Marking sleeves

SUCOFLEX is manufactured by highly qualified HUBER+SUHNER employees and tested against strict quality standards under controlled conditions. This results in micro-wave cable assemblies meeting all of your needs for top quality and high precision reproducibility.

SUCOFLEX is always supplied as a complete, tested micro-wave cable assembly with defined and guaranteed radio frequency and mechanical values.

SUCOFLEX cables, connectors, and assemblies are entirely developed, manufactured, tested, and supplied by HUBER+SUHNER.

SUCOFLEX provides an optimum solution to your microwave transmission problems.

SUCOFLEX is defined in the following way:
One standard assembly consists of the following items if no additional specifications are provided:

- Microwave cable specified
- Connectors specified
- Marking sleeve with serial number
- RF test protocol showing insertion and return losses

SUCOFLEX is a registered trade mark for microwave cable assemblies from HUBER+SUHNER.

All cable assemblies are available with phase match and/or armouring.
P: Stranded inner conductor for high flexible cable with improved phase variation vs. flexure
E: Thermoplastic polyurethane (TPU) jacket for highest flexibility and a low bending moment

Frequency

Overview SUCOFLEX® 526

Plug, test, smile

Product description

When it comes to test and measurement, SUCOFLEX 526V and SUCOFLEX 526S assemblies guarantee the highest level of satisfaction. Thanks to their unique cable and connector design, they deliver best-in-class phase and amplitude stability vs. flexure, movement, temperature and tensile stress in combination with outstanding return and insertion loss up to 26.5 GHz.

Sucoflex 526 product comparison

	Sucoflex_526V	Sucoflex_526S
Applications	Vector network analysers (VNAs) Critical laboratory conditions	Bench top testing, RF production testing, Automated test equipment
Features and benefits	Best-in-class phase and amplitude stability vs. flexure, movement, temperature and tensile stress	Excellent return- and insertion loss
	Excellent return loss	Phase and amplitude stability vs. flexure and movement
	Extremely flexible and ease of handling	Abrasion, moisture and dust resistance
	Torque, crush and kink resistant Robust and precise center positioning of 3.5 mm center conductors	
	Precise and repeatable measurements Long service life	
	Reduce total cost of test with durable, reliable performance Increased test and measurement efficiency saving costs due to reduced calibration intervals	
Diameter	13 mm	7.7 mm
Min. bending radius	50 mm	25.4 mm
Available connectors	PC 3.5	PC 3.5, SMA, N
Crush resistance	80 kN/m	26 kN/m
Typ. flex cycles	100.000 2.0 Mio. for slight movements	100.000
Operating temperature	laboratory conditions, analyzer specific (+15 to +30 °C)	-55 to +125°C
RoHS, REACH	Compliant	Compliant
Operating frequency	up to 26.5 GHz	up to 26.5 GHz
Velocity of propagation	80 %	77 %
Return loss	typ. 25 dB min. 20 dB	typ. 25.0 dB min. 19 dB
Insertion loss (25 / 38 / 48 in) @ 26.5 GHz	max. 2.5 / 3.6 / 4.4 dB	typ. 1.63 dB/m incl. connectors max 1.77 dB/m incl. connectors
Screening effectiveness	> 90 dB	> 90 dB
Amplitude stab. vs. movement	max. 0.05 dB	typ. ± 0.05 dB
Amplitude stab. vs. flexure	max. 0.08 dB	typ. ± 0.05 dB
Phase stability vs. flexure (25 / 38 / 48 in)	max. 3.9 / 7.4 / 10°	typ. ± 3.0°
Phase stab. vs. tensile stress	max. 0.1°/GHz 100 N up to 26.5 GHz	N/A
Phase stab. vs. temperature	typ. 50 ppm +15 °C to +30 °C, 26.5 GHz	typ. 1500 ppm -55°C to + 125°C
Phase matched assemblies available	No	Yes, upon request
New optimised PC3.5 interface supports S-parameter measurements with the highest accuracy	Yes	Yes
Stock assemblies available	Yes	Yes

SUCOFLEX® 526V

The only VNA microwave cable worldwide with a typical 50 ppm phase variation vs. temperature between +15 and +30 °C. No "PTFE phase knee" at +19 °C as seen on conventional VNA test cable assemblies which cause phase variations and unstable measurements in critical laboratory conditions.

Available connectors

Product configuration	85069744	85081169	85070046	85081172	85070047	85081177

SUCOFLEX® 101

The SUCOFLEX 101 high end cable assemblies are designed to provide optimal performance up to 50 GHz where stringent electrical requirements – in particular stability and low loss – are important. Their mechanical and climate resistance properties surpass those of standard flexible cable. Additionally protected by an A ruggedisation, the SUCOFLEX 101PE becomes a flexible measurement and test cable up to 50 GHz!

Product features

- Impedance 50 Ω
- Applicable up to 50 GHz
- High stability and low loss
- Wide range of connectors
- VNA-specific connectors

SUCOFLEX® 102

SUCOFLEX 102 are ideal for applications up to 46 GHz or wherever the weight or the diameter are the critical factors to be taken into account. The connectors mainly used here are PC2.4 and SK, but SMA, N, and TNC are also available for low frequency applications. Typical applications include test laboratories and aircraft manufacture. The available ruggedisations are matched to the particular applications.

Product features

- Impedance 50 Ω
- Applicable up to 46 GHz
- High stability and low loss
- Wide range of connectors
- LSFH jacket and further ruggedisations on request

SUCOFLEX® 104

SUCOFLEX 104 cables that can be universally applied with the widest range of connector types, are available with most ruggedisations.

Product features

- Impedance 50 Ω
- Applicable up to 26.5 GHz
- High stability and low loss
- Wide range of connectors
- VNA-specific connectors, Quick lock nuts
- LSFH jacket and further ruggedisations on request

Assembly types		SUCOFLEX 104	SUCOFLEX 104E	SUCOFLEX 104D

SUCOFLEX® 126

SUCOFLEX_126 cables combines the low loss and power of SUCOFLEX 104 with the phase stability of SUCOFLEX 104P. Where low loss, combined with phase and amplitude stability is required, SUCOFLEX_126 must be applied.

Product features

- Applicable up to 26.5 GHz
- Excellent return loss
- Excellent phase- and amplitude stability
- Low loss
- Wide range of connectors
- Crush resistant armour available

Advantages of SUCOFLEX[®] 126 versus SUCOFLEX[®] 104 P

- 30 % lower loss
- 20 % higher power
- Improved return loss
- Same phase/loss stability
- Same flexibility
- Same connectors
- Same price

SUCOFLEX® 106 / 118

SUCOFLEX 106/118 are used in applications where special consideration must be given to low attenuation or high power handling capacity. Wherever phase stability is additionally demanded, the suitable type is the SUCOFLEX 118. Most ruggedisations can be used in conjunction with these cables, and also the main connector series.

Product features

- Impedance 50 Ω
- Applicable up to 18 GHz
- High stability and low loss
- Wide range of connectors
- Further ruggedisations on request

Armouring options

Type A

Consists of steel spring (round wire), steel braid and polyurethane (TPU) jacket. Up to +85 °C, this ruggedisation offers excellent protection against compression, tension, abrasion and other mechanical forces acting upon the cable.

Armouring:

- Surface material: TPU
- Max crush resistance: 80 kN/m
- Torsional stiffness $8.5 \times 10 \text{ Nm}^2/\text{o}$

Max tensile force:

- Ruggedisation 1 500 N
- Cable connector junction 400 N

Type B

Consists of a flexible hose of stainless steel. The ruggedisation protects the cable against compression, abrasion, mechanical injuries and open fire and hot objects (e.g. soldering irons). The continuous temperature is limited by the cable to +165 °C, and in the immediate proximity of the connectors to the maximum connector temperature.

Armouring:

- Surface material: stainless steel
- Max crush resistance: 80 kN/m
- Torsional stiffness $3.2 \times 10 \text{ Nm}^2/\text{o}$

Max tensile force:

- Ruggedisation 1000 N
- Cable connector junction 500 N

Type D

Consists of an aramid yarn braid impregnated with silicon varnish. The ruggedisation protects the cable against abrasion and brief high temperatures.

Armouring:

- Surface material:
- Aramid yarn braiding impregnated with silicon varnish

SUCOFLEX® 200

The tape wrapped SUCOFLEX 200 microwave cable assemblies have been specifically developed for high performance and anywhere the best insertion loss, high phase stability versus temperature, excellent return loss, and mechanical stability are of the utmost importance.

Product features

- Impedance 50 Ω
- Ultra low loss
- Phase stable vs. temperature
- Robust mechanical construction
- Phase stable vs. bending
- Operating frequency up to 40 GHz
- Velocity of propagation 82 %

Assembly types		SUCOFLEX_229	SUCOFLEX_240
Max. operating frequency	GHz	29	40
Application		static and dynamic	static and dynamic
Velocity of propagation	%	82	82
Weight	g/m	61	37
Min. bending radius static	mm	23	8.4
Min. bending radius repeated	mm	70	25

Sucotest 26/40

Sucotest 26/Sucotest 40 cable assemblies are high frequency, low loss cables which are triple shielded for superior RF isolation. The internal stainless steel outer braid provides higher pull strength and lighter weight than RG style cable. Nomex and polyolefin jackets are also available.

Product features

- Impedance 50 Ω
- Applicable up to 26/40 GHz
- Amplitude stability: < 0.1 dB at 26.5 GHz for 200 flexes 180° in one plane around a 2" radius, 0.2 dB with 600 flexes
- Five shields for super RF shielding (–120 dB)
- Steel outer shield for high pull strength
- Low cost, available from stock

Recommended connectors

ST26	SMA
ST40	SK

Sucotest 26/40 – Attenuation/power handling

Attenuation (nominal values at +25 °C ambient temperature)

Power handling (maximum values at 25 °C ambient temperature and sea level)

Sucotest 18(A)

Sucotest 18 is ideal for daily use in component and assembly shops, test labs, and high speed digital testing applications.

Sucotest 18A armoured test assemblies are ideal for testing wireless communication infrastructures and outdoor use.

Features and benefits

- Applicable up to 18.0 GHz
- Low insertion loss
- Excellent VSWR
- Unique loss stability
- High flexibility despite of armouring
- Phase and loss stability with flexure
- Crush-, torque- and kink-resistant
- Waterproof IP68

Recommended connectors

ST_18	SMA, QMA, N
ST_18A	N, 7/16

Sucotest 18(A)

Attenuation (nominal values at +25 °C ambient temperature)

Power handling (maximum values at 25 °C ambient temperature and sea level)

TL-8A

TL-8A assemblies are designed for testing components or equipments up to 8 GHz with network analyser (NA). This economical assembly family is made with a double screened, foamed PE cable and protected with an armouring using a moulded cable entry. The excellent electrical performance combined with a high mechanical endurance is ideal for use in test labs and in operations.

Product features

- Impedance 50 Ω
- Applicable up to 8 GHz
- High mechanical endurance
- Excellent insertion and return loss
- High mating cycle
- N connector with quick-lock nut
- Excellent performance to price ratio
- Free of halogen

Recommended connectors

TL-8A	SMA, N
	Other connectors available on request.

Specifications

Key values						
Frequency		up to 8 GHz				
Return loss		1 GHz	2 GHz	4 GHz	6 GHz	8 GHz
	up to 1 m	≤ -30 dB	≤ -27 dB	≤ -25 dB	≤ -23 dB	≤ -21 dB
	≥ 3.0 m	≤ -29 dB	≤ -26 dB	≤ -24 dB	≤ -22 dB	≤ -20 dB
Attenuation		1.24 dB/m at 8 GHz (typical)				
Waterproof		no gasket on interface				
Durability (matings)		> 3000 cycles				
Assembly length		min. 300 mm, max. 3000 mm				

Standard assemblies

Item no.	Type	Length	Frequency	Max. insertion los	Max. VSWR	ROHS compliant

TL-P series

HUBER+SUHNER TL-P assemblies are designed for indoor and outdoor applications where passive intermodulation (PIM) has to be tested. This assembly family is based on a flexible cable which is optimised up to 4 GHz and protected with a steel armouring. The robust design is completed with a molded protection between connector and cable.

Product features

- Impedance 50 Ω
- Applicable up to 4 GHz
- Excellent PIM performance (≤ -160 dBc)
- High mechanical endurance
- Return Loss performance
- High mating cycle ($> 2\,000$)
- Highly flexible, rugged and reliable design
- Easy to handle for work in field
- Excellent performance to price ratio

Recommended connectors

TL-P	716, N, 4.3-10 (screw version)
	Other connectors available on request.

Specifications

Key values				
Frequency	up to 4 GHz			
Return loss (up to length = 3.0 m)	1 GHz	2 GHz	3 GHz	4 GHz

Bend-to-end assemblies

Minibend is a truly flexible coaxial cable assembly which is designed for use in low profile, internal, point-to-point interconnections between RF modules within communications systems. Minibend replaces 0.086 inch custom semi-rigid cables with standard flexible cables, eliminating the need for predefined custom lengths and bend configurations. Minibend provides you with a preassembled and tested high performance, cost-effective alternative in a variety of standard lengths and connector configurations.

Minibend R is designed for use in complex, congested environments where higher cable retention force is required. Minibend R's pull strength is more than 70 % greater than a standard Minibend. When installed and bent at the minimum bend radius, Minibend R will tolerate multiple 90° rotations at the cable/connector junction. The "R" ruggedisation can be added to any Minibend connector style. All materials used in Minibend R assemblies meet or exceed NASA TML and CVCM requirements for use in spacecraft applications.

Minibend

Low profile, high performance microwave coaxial cable assemblies

- Frequency range up to 65 GHz
- Triple shielded for high isolation
- Eliminates need for costly right angle connectors
- Direct replacement for 0.086 inch semi-rigid cables

Minibend L

Low profile, high performance low loss microwave coaxial cable assemblies

- Frequency range up to 50 GHz
- Triple shielded for high isolation
- Microporous dielectric for 30 % lower insertion
- Direct replacement for 0.086 inch semi-rigid cables

Microbend

Ultra low profile, high performance, microwave coaxial cable assemblies

- Frequency range up to 90 GHz
- Triple shielded for high isolation
- Direct replacement for 0.047 inch semi-rigid cables
- Guaranteed 10 lbs (45 N) pull force

Mini141

Low profile, high performance ultra low loss microwave cable assemblies

- Frequency range up to 40 GHz
- Triple shielded for high isolation
- Eliminates need for costly right angle connectors
- Direct replacement for 0.141 inch semi-rigid cables

Minibend CTR

Combines the industry-renowned flexibility of HUBER+SUHNER Astrolab's bend-to-the-end connector termination technology with industry leading phase vs. temperature performance.

Minibend

Minibend is a truly flexible coaxial cable assembly which is designed for use in low profile, internal, point-to-point interconnections between RF modules within communications systems. Minibend replaces 0.086 inch custom semi-rigid cables with standard flexible cables, eliminating the need for predefined custom lengths and bend configurations. Minibend provides you with a preassembled and tested high performance, cost-effective alternative in a variety of standard lengths and connector configurations.

Product features

- Impedance 50 Ω
- Applicable up to 65 GHz
- Direct replacement for 0.086 inch semi-rigid cables
- Stock delivery on standard lengths

Recommended connectors

Minibend L

Minibend L is an enhanced, low loss version of the Minibend flexible coaxial cable assembly with increased phase stability and power handling capacity which is designed for use in low profile, internal, point-to-point interconnections between RF modules within communications systems. Minibend L replaces 0.086 inch custom semi-rigid cables with standard flexible cables providing 30 % lower attenuation and eliminating the need for predefined custom lengths and bend configurations. Minibend L provides you with a preassembled and tested high performance, cost-effective alternative in a variety of standard lengths.

Product features

- Impedance 50 Ω
- Applicable up to 50 GHz
- Direct replacement for 0.086 inch semi-rigid cables
- Stock delivery on standard lengths
- Microporous dielectric for 30 % lower insertion loss, improved phase stability and higher power handling

	177.8 mm	(7 inch)	304.8 mm	(12 inch)

Minibend CTR

The minibend CTR family of cable assemblies combines the industry-renowned flexibility of HUBER+SUHNER Astrolab's bend-to-the-end connector termination technology with industry leading phase vs. temperature performance to create a stable, reliable, MIL-DTL-17 qualified interconnect solution to satisfy an endless range of customer applications where phase stability is key. The broad selection of connector interfaces offered on minibend CTR cable assemblies ensures that we are able to meet the unique requirements of our customers.

Features

- Flat phase change over temperature
- Bend-to-the end technology
- Outstanding return loss performance

Benefits

- Increased system accuracy over temperature change
- Higher reliability due to solderless junctions

Recommended connectors

Minibend CTR	SMA, SK, SMP,MMPX
	Other connectors available on request

Phase stability versus bending

Frequency	Test one*		Test two**	
	minibend CTR	minibend	minibend CTR	minibend
24.0 GHz	1.0°	1.4°	3.7°	3.9°
1.0 GHz	0.1°	0.1°	0.1°	0.2°

* Test one: 152 mm long assemblies were flexed 90 degrees in a 6.35 mm radius directly behind the connector.

** Test two: 406 mm long assemblies were flexed 180 degrees with a 10.16 mm radius in the middle.

Phase stability versus temperature

Standard lengths	76.2 mm	(3 inch)	203.2 mm	(8 inch)
	101.6 mm	(4 inch)	228.6 mm	(9 inch)
	127 mm	(5 inch)	254 mm	(10 inch)
	152.4 mm	(6 inch)	279.4 mm	(11 inch)
	177.8 mm	(7 inch)	304.8 mm	(12 inch)

Microbend

Microbend assemblies provide you with a standard preassembled and tested high performance, cost-effective truly flexible alternative to 0.047 inch custom semi-rigid cable assemblies, eliminating the need for predefined custom lengths and bend configurations. Microbend features include 35 % lower loss than 0.047 inch semi-rigid cable, a minimum bend radius of 1.52 mm (0.060 inch) and triple shielding for high isolation. Microbend assemblies are available with a wide range of connector interfaces. All Microbend assemblies are available only in a ruggedised version.

Product features

- Impedance 50 Ω
- Applicable up to 65 GHz
- Stock delivery on standard lengths
- 35 % lower insertion loss than 0.047 inch semi-rigid cables

Recommended connectors

Microbend	SMA, SSMA, SK, SMP, SMPM, SMPM-T, 1.85 mm, MMPX, 1.00 mm
	Other connectors available on request

Microbend 1R

The Microbend 1R cable assembly is a true DC to 85 GHz solution that uses PC 1.0 connectors for microwave frequency applications. This assembly achieves high mechanical pull strength from a stainless steel outer braid, yet remains light-weight and flexible. Solderless, ruggedized PC 1.0 bend-to-the-end connector junctions allow the minimum bend radius to be applied at the connectors when spatial constraints are a concern, eliminating the need for signal attenuating right angle connectors. The flat wire inner braid of the cable decreases insertion losses and increases signal stability during flexure. Triple shielding in the cable increases RF signal isolation in high density situations.

Product features

- Impedance 50 Ω
- Applicable up to 85 GHz
- Solderless bend-to-the-end technology
- Uses PC 1.0mm connectors
- High strength, high flexibility
- Excellent loss stability over flexure
- Triple shielded for RF isolation
- Rugged and reliable
- Wide temperature range (–55 to +125 °C*)
- Direct replacement for 0.047 inch semi-rigid cables

Recommended connectors

Microbend 1R	PC 1.0 mm
	Other connectors available on request

Specifications

Cable	Operating frequency	Velocity	Weight	Min. bending radius for ± 180°		Temperature range
	GHz			static mm	repeated mm	
32041	85	70	11.9	1.50	4.6	–55 to +125*

* Extended temperature ranges available upon request

Standard lengths	76.2 mm	(3 inch)
	152.4 mm	(6 inch)
	304.8 mm	(12 inch)

110 GHz frequency cable (32061)

The 32061 Steel-flex cable is constructed to be a flexible and high strength for true 110 GHz solution for laboratory research and high-speed digital measurements when paired with precision PC 1.0 mm connectors. Triple shielding provides superb RF isolation for minimizing signal leakage and attenuation. The flat wire inner braid reduces insertion loss and increases signal stability during flexure. A stainless steel outer braid provides high pull strength as well as additional shielding. Solid extruded PTFE dielectric gives the cable added durability for physically demanding applications.

Product features

- Impedance 50 Ω
- Applicable up to 110 GHz
- High pull strength
- Triple shielded for RF isolation
- Low phase loss vs. flexure
- Rugged and reliable
- Wide temperature range (–55 to +125 °C*)

Recommended connectors

Microbend	PC 1.0 mm
	Other connectors available on request

Specifications

	304.8 mm	(12 inch)

Mini141

Mini141 is an enhanced, low loss version of the Minibend flexible coaxial cable assembly with increased phase stability and power handling capacity which is designed for use in low profile, internal, point-to-point interconnections between RF modules within communications systems. Mini141 replaces 0.141 inch custom semi-rigid cables with standard flexible cables providing 20 % lower attenuation and eliminating the need for predefined custom lengths and bend configurations. Mini141 provides you with a preassembled and tested high performance, cost-effective alternative in a variety of standard lengths.

Product features

- Impedance 50 Ω
- Applicable up to 40 GHz
- Direct replacement for 0.141 inch semi-rigid cables
- Stock delivery on standard lengths
- Microporous dielectric for 20 % lower insertion loss, improved phase stability and higher power handling

Recommended connectors

Mini141	SMA, N, TNCA, SK, SMP
	Other connectors available on request

Specifications

Cable	Operating frequency	Velocity	Weight	Min. bending radius for ± 180°	Temperature range

Minibend series – Attenuation/power handling

Attenuation (nominal values at +25 °C ambient temperature)

Power handling (maximum values at 25 °C ambient temperature and sea level)

High flexible and rigid cable assemblies

HUBER+SUHNER develops and produces coaxial cables for a wide range of applications all over the world according to international standards. Many years of experience and in-house manufacturing combine to produce a portfolio of components adapted perfectly to one another. Continuous further development ensures that the products are perfectly aligned with market requirements and incorporate the latest technology. An innovative development department with in-house test laboratories can react quickly to changing market trends and even develop customer-specific solutions.

Sucoform microwave coaxial cables offer distinct mechanical advantages over semi-rigid cables. They are based on the same design as the standard PTFE insulated semi-rigid cables, but have a tin-soaked copper braid for the outer conductor, giving them outstanding hand-formability. These cables combine the excellent characteristics of semi-rigid cables with those of flexible coaxial cables. Thanks to their small bending radii, they allow spacesaving routing and packaging.

The semi-rigid cable is unique in that it is easily bent to finished shape and still maintains its set after bending. This property makes it ideal for use with automated bending equipment as well as hand forming by bending tools. The semi-rigid cables provide greatly extended environmental parameters. The cables exhibit highly favourable electrical characteristics, particularly an impedance tolerance as low as 0.5 Ohm for a 0.0141" diameter cable with nominal impedance of 50 Ohm.

Multiflex 86/141

The flexible alternative to semi-rigid

- Frequency range up to 65 GHz
- High screening
- High flexibility
- Resistant to chemicals, oils, lubricants, humidity

Sucoform

The handformable alternative to semi-rigid

- Frequency range up to 40 GHz
- High phase stability
- Good flexibility
- Quick and easy assembling

Cobra-flex

The flexible semi-rigid microwave coaxial cable assemblies

- Frequency range up to 40 GHz
- Minimal dielectric migration
- Standard semi-rigid size
- Optional extended temperature range -269 to $+250$ °C

Semi-rigid

The form stable microwave cable

- Frequency range up to 65 GHz
- Excellent VSWR performance
- Easy to form, strip and solder
- Small sizes permit use in high-density areas

Multiflex 86/141

Multiflex microwave cables are the flexible alternative to semi-rigid cables. They are used in commercial and military RF and microwave airborne systems, communication systems, cellular base stations, satellite, ground systems – in brief: anywhere a "flexible semi-rigid cable" is required.

Product features

- Impedance 50 Ω
- Applicable up to 65 GHz
- Comparable electrical performance as corresponding semi-rigid cable types, high screening
- High flexibility: no 3D drawings required for design and manufacture
- Semi-rigid connectors can be used; quick and easy assembly
- Resistant to chemicals, oils, lubricants, humidity, etc.

Recommended connectors

MF_86	MCX, MMBX, MMCX, MMPX, SMA, PC3.5, SK,
MF_86_HE	PC1.85, BMA, QMA
MF_141	SMA, PC3.5, BMA, QMA, BNC, TNC, N
	Other connectors available on request.

Specifications

Cobra-flex

Cobra-flex are high performance semi-rigid cables, which utilise a seamless outer conductor to provide excellent RF shielding. The convoluted design gives this cable excellent phase tracking characteristics over temperature due to minimal dielectric migration. These cables are offered with many options including tin-plated outer conductor, copper clad steel center conductor for low thermal conductivity in cryogenic applications.

Product features

- Impedance 50 Ω
- Applicable up to 40 GHz
- Minimal dielectric migration
- Higher flexibility without outer conductor fatiguing
- Standard semi-rigid sizes
- Optional extended temperature range -269 to +250 °C for cryogenic applications

Recommended connectors

RF cables

HUBER+SUHNER offers a wide range of coaxial cables, developed to meet the highest standards. A balanced range of flexible coaxial cables provides the best performance for demanding applications. Our premium quality cables have excellent electrical and mechanical properties and are used globally in various applications to meet the highest demands. Comprehensive, professional support in conjunction with our comprehensive product range makes HUBER+SUHNER a leading provider of radio frequency solutions in defense applications.

Performance line: high-temperature coaxial cable

Performance line – high-temperature coaxial cable

Product description

The PTFE/FEP cables from our RG series are designed for applications up to 200 °C and are characterised by low losses, especially at high frequencies. The cables in the Enviroflex family do not contain fluorine plastics in the dielectric or in the jacket and thus provide a robust and environmentally friendly option.

RF connectors, adaptors and resistive components

HUBER+SUHNER is a leading global provider of RF connectors, adaptors, and resistive components. We offer a wide range of standard connectors and application specific solutions. With our experience, product knowledge and application know-how we support customers with application specific solutions.

Within the standard connector series like SMP, SMA, BNC, TNC, N and others, we provide a comprehensive range of connectors for different applications. We constantly refine our product portfolio with new and innovative solutions. HUBER+SUHNER has set market standards with board-to-board connectivity solutions like MMBX and MBX and with connectors with quick-lock mating mechanisms like QMA and QN.

Additionally HUBER+SUHNER supports its customers worldwide with application engineers to help customers select the right product for each specific application. The success of HUBER+SUHNER is based on high quality products, design-in support, and expertise in RF technology. We are your partner for RF connectivity solutions. Please find more product details on our website or in our RF coaxial connectors general catalogue or in our Resistive components catalogue.

Connector overview

HUBER+SUHNER is a leading global provider of radio-frequency connectors for the transmission of analogue and digital signals and has many years of experience in the engineering and production of coaxial connectors. In addition to a broad selection of standard connectors for a wide range of different applications, customer-specific solutions for the following connections are also developed and manufactured

Microminiature connectors

Ultra low profile, high performance, microwave coaxial cable assemblies

- Frequency range up to 90 GHz
- Triple shielded for high isolation
- Direct replacement for 0.047 inch semi-rigid cables
- Guaranteed 10 lbs (45 N) pull force

Precision multicoax connectors

Low profile, high performance ultra low loss microwave cable assemblies

- Frequency range up to 50 GHz
- Triple shielded for high isolation
- Eliminates need for costly right angle connectors
- Direct replacement for 0.141 inch semi-rigid cables

Board-to-board connectors

HUBER+SUHNER connectors are especially developed for board-to-board and board-to-module RF interconnections. In addition to the board-to-board portfolio, HUBER+SUHNER provides the highest flexibility for current and future radio module applications.

Adaptors

The RF adaptor assortment covers all commercially available RF interfaces and configurations, frequency, and return loss specification. Any RF coaxial adaptor can be modified to fit specific applications.

Attenuators, terminations and DC blocks

The comprehensive range of high-quality radio frequency attenuators, terminations, and DC blocks is based around the varying needs of test and measurement applications.

Connectors – Overview

Series	Coupling mechanism	Frequency range	
BNC	bayonet	4 GHz	
MCX	snap-on	6 GHz	
MMCX	snap-on	6 GHz	
7/16	screw-on	7.5 GHz	
QN	quick-lock	11 GHz	
TNC	screw-on	11 GHz	
4.3-10	screw-on/quick-lock	12 GHz	
MMBX	snap-on	12.4GHz	
N	screw-on	18 GHz	
QMA	quick-lock	18 GHz	
SMA	screw-on	26.5 GHz	
PC 3.5 (3.5 mm)	screw-on	26.5 GHz	
SK (2.92 mm)	screw-on	40 GHz	
SMP	snap-on	40 GHz	
PC 2.4 (2.4 mm)	screw-on	50 GHz	
PC 1.85 (1.85 mm)	screw-on	65 GHz	
MMPX	snap-on	65 GHz	
SMPM/SMPM-T	screw-on/snap-on	65 GHz

Microminiature connectors

MMPX

- Broadband characteristics from DC to 65 GHz
- Excellent return loss
- Excellent shielding, low cross-talk
- 5.08 mm pitch (0.2 inch)
- Mechanically robust design

SMP

- Applications up to 40 GHz.
- MIL-SPEC qualified
- Provide true compatibility
- Guaranteed mechanical performance over the mating life of the connector

SMMP

- Applications up to 65 GHz.
- MIL-SPEC qualified
- Available as well for MMPX, SMMP-T, and SMP
- Large portfolio of different PCB mount SMMP

SMMP-T

- Applications up to 65 GHz
- Smallest threaded open source connector on the market
- Combination of a MIL-STD-348 SMMP female interface together with a retractable threaded nut
- Centerline-to-centerline spacing of just 5 mm (0.20 in)

Board-to-board connectors

MBX

- Very high axial float – best in class
- High output power
- Excellent return loss values
- Smallest board-to-board distances in class

MBX 2nd generation

- Very high axial float – best in class
- Excellent return loss values
- Smallest board-to-board distances in class

MFBX

- Medium float
- Low cost
- Very good board-to-board shielding
- Small board-to-board distances

MMBX

- Very high frequencies – best in class
- Very good return loss values
- Smallest board-to-board distances in class

SMPM

- Ultra high frequency range (DC to 65 GHz)
- MIL-STD-348 qualified
- Various detent options
- Custom ganged connection options available
- Smallest pitch distance and envelope
- Smallest board-to-board distances
- True 65 GHz board-to-board solution

SMP

- Ultra high frequency range (DC to 40 GHz)
- MIL-STD-348 qualified
- Various detent options
- Rugged and reliable
- Most widely used board-to-board connector in the market
- Small board-to-board distances

Characteristics	MBX and MBX ^{2nd}	MFBX	MMBX	SMP	SMPM

PC 1.0 adaptors

HUBER+SUHNER PC 1.0-to-PC 1.0 adaptors are precision test components for use in microwave applications of up to 110 GHz.

The adaptors feature optimum return loss and insertion loss, excellent mechanical stability and extreme reliability. The HUBER+SUHNER PC 1.0 complies with the IEEE standard 287™-2007 (Annex J).

Key characteristics

- Broadband characteristics from DC to 110 GHz
- Excellent return loss
- Very low insertion loss
- Robust design
- Phase matched within the series
- De-embedding data available on request

Product portfolio within series (PC 1.0-to-PC 1.0)

- Adaptor jack/jack (31_PC1-50-0-1/111_UE, 85031727)
- Adaptor plug/plug (32_PC1-50-0-1/11-_UE, 85031743)
- Adaptor plug/jack (33_PC1-50-0-1/11-_UE, 85031288)

80 GHz coaxial-to-PCB all-in-one solution

The unique HUBER+SUHNER 80 GHz solution features a true 80 GHz coaxial-to-PCB transition with superb electrical performance combined with an easy snap connection mechanism to the PCB. The broadband characteristics, excellent electrical performance and easy handling facilitate high-end measurement setups for high-speed digital testing and RF testing.

The solution is composed of field-tested standard MMPX snap connectors on the PCB side coupled with an MMPX male-to-PC 1.0 female adaptor. The adaptor and test equipment are linked using a HUBER+SUHNER Astrolab 1 mm male-to-male cable assembly.

HUBER+SUHNER MMPX is a HUBER+SUHNER proprietary standard, the HUBER+SUHNER PC 1.0 complies with IEEE Standard 287™-2007 (Annex J).

Key characteristics

- Broadband characteristics from DC to 80 GHz
- Excellent return loss
- Easy handling
- De-embedding data available on request

Recommended PCB connectors

- 82_MMPX-S50-0-2/111_NM, 84096711 (blister tape, 10 pcs)
- 82_MMPX-S50-0-2/111_NM-1, 84096752 (reeled blister tape, 750 pcs)
- 92_MMPX-50-0-1/111_NM, 84009138 (blister tape, 10 pcs)
- 92_MMPX-50-0-1/111_NM-1, 84009140 (reeled blister tape, 500 pcs)
- 96_MMPX-50-0-2/111_NM-1, 84093961 (blister tape, 10 pcs)
- 96_MMPX-50-0-2/111_NM, 84093966 (reeled blister tape, 750 pcs)
- 96_MMPX-50-0-3/111_NM-1, 84099981 (blister tape, 10 pcs)
- 96_MMPX-50-0-3/111_NM, 84099988 (reeled blister tape, 450 pcs)

Required adaptor

- 33_MMPX-PC1-50-1/111_NE, 85031764 (single packaging)

Recommended assemblies

- Steel-flex, 32061E-29840-29840-6, 110 GHz (single packaging)
- Microbend 1R-6, 85 GHz (single packaging)

Adaptors – Overview

HUBER+SUHNER is manufacturing a wide range of adaptors in various configurations such as within series or between series, straight or angled designs, and some with panel mount features. They are classified according to their typical intended applications, each of which requiring specific properties. There are four major groups: standard, precision, low passive intermodulation (PIM), and quick-mate adaptors.

Standard adaptors

Features

- Wide range of different configurations
- Appropriate materials

Benefits

- Most common interfaces available
- Accurate transitions
- Effective and reliable interconnection solutions

Precision adaptors

Features

- Precision interfaces
- Excellent electrical performance
- Premium base materials and platings

Benefits

- For precision laboratory measurements
- High repeatability and accuracy

Low PIM adaptors

Features

- Outstanding low intermodulation performance
- Excellent electrical contacts
- Non-magnetic materials

Benefits

- High reliability
- Repeatable intermodulation measurements

Hermetically sealed adaptors

Features

- Glass-fired seal
- 100 % tested
- Wide temperature range

Benefits

- Hermetically sealed feed-thru

Custom adaptors

Adaptors can be custom designed according to your specific application requirements:

- Between/in-series adaptors
- Stainless steel, beryllium copper, brass materials
- Gold, passivated, SUCOPRO®, SUCOPLATE® platings

Attenuators

HUBER+SUHNER attenuators are passive resistive components used to reduce the input power. The attenuation can vary from 1 up to 40 dB and power range up to 300 W. In this selection guide only low power attenuators are listed. For more options regarding interface, frequency range, and power handling, please consult the electronically available Resistive components catalogue.

Power	0.5 to 300 W
Connectors 50 Ω	BNC, N, PC 2.4, SK (2.92 mm), QMA, SMA, TNC
Connectors 75 Ω	BNC, N
Frequency range	from DC up to 50 GHz
Attenuation range	1 to 40 dB

50 Ω attenuators up to 2 Watt, connector configuration plug to jack

Power handling capability

The referenced average power is applicable at 25 °C ambient temperature. For higher ambient temperature a certain power derating may be required. Please see detailed product specification. Medium and high power products must be mounted in such a way that free air convection around heat sink is given to assure performance.

Terminations

Terminations are used to terminate an open RF port with a specific RF interface. The terminations vary regarding power handling from 0.5 W up to 60 W. In this selection guide only low power terminations are listed. For more options regarding interface, frequency range, VSWR, and power handling please consult the electronically available Test+Measurement catalogue.

Power	0.5 to 60 W
Connectors 50 Ω	TNC, SMB, SMC, SMA, QN, QMA, QLA, SK (2.92 mm), PC 2.4, N, MMCX, MCX, BNC, BMA, 7/16
Connectors 75 Ω	TNC, N, BNC, MCX
Frequency range	from DC up to 50 GHz
VSWR	refer to datasheet

* 50 Watt, if the termination is mounted on an additional heat sink with a max. thermal resistance (Rth) of 5 K/Watt. Without additional heat sink this termination is applicable up to 25 Watts only.

DC blocks

A DC block separates or blocks DC voltage (galvanic isolation) but allows an RF signal to along the coaxial transmission line.

Features and benefits

- Broadband
- RF signal passes with negligible loss
- Blocking of DC
- Galvanic isolation of centre conductor

50 Ω, connector configuration male to female

Interface characteristics	Frequency (GHz)	Voltage max. (V)	Block type	VSWR max.	Return loss min. (dB)	HUBER+SUHNER type	Item no.
BNC	5	250	centre conductor	1.22	20.1	1100.01.A	22550233
N	5	250	centre conductor	1.22	20.1	1100.17.A	22550232
SMA	18	200	centre conductor	1.35	16.5	1100.19.0001	84107082

Resistive power dividers

Power dividers are designed to split an RF signal equally into two output signals with an insertion loss of 6 dB.

Features and benefits

- Broadband down to DC
- Very low return loss
- Cost effective solution to tap off a signal
- Very compact

50 Ω

Interface characteristics	Frequency (GHz)	VSWR max.	Power (W)	Return loss min. (dB)	HUBER+SUHNER type	Item no.
BNC (f-f-f)	2	1.15	1	23.1	4901.01.A	22550077

m: refers to plug (male), f: refers to jack (female)

Low passive intermodulation load

HUBER+SUHNER offers high performance intermodulation loads for Test+Measurement that are primarily used to close open parts in IM sensitive applications, such as an open port of a hybrid coupler. These intermodulation loads are made by using high performance cable and connectors, especially developed for IM sensitive applications, and are assembled by highly trained HUBER+SUHNER staff to obtain the best IM and VSWR results.

Features and benefits

- High repeatability
- Outstanding IM, better than -160 dBc
- Other power levels and customised designs available on request
- Currently HUBER+SUHNER offers these terminations as three standard types

Low intermodulation load, 50 Ω

Interface	Frequency (GHz)	Power (W)	3rd order intermodulation* (dBc)	HUBER+SUHNER type	Item no.
DIN 7/16 female	2	50	≤ -160	6550.41.0001	22659656

* at 2 x 43 dBm/2 x 20 W carrier

Phase shifters

HUBER+SUHNER phase shifters allow phase change while maintaining constant VSWR and insertion loss values. These passive devices have proven to be successful in aerospace, missile, and satellite programs. The construction of all phase shifters and trimming devices incorporate fine gauge threads for precise tuning. Phase shifters are terminated with precision interfaces per MIL-STD-348 including SMA, TNC, and N (in series and between series). However, custom devices can be manufactured using other interfaces.

Available configurations

- SMA plug to SMA plug
- SMA plug to SMA jack
- SMA jack to SMA jack
- N plug to N plug
- N plug to N jack
- N jack to N jack
- N jack to SMA plug
- N plug to TNC jack
- TNC jack to TNC jack
- SMA jack to cable
- SMA plug to cable
- N plug to cable

Services and support

3D files

For the exchange of CAD models between various CAD systems, HUBER+SUHNER is providing the customers with 3D files in IGS or STEP data format.

Simulations/PCB layouts

HUBER+SUHNER has the ability and the tools for computer simulation of customer specific printed circuit board layouts.

Customized connector solutions

While HUBER+SUHNER offers an extensive product line of connectors and adaptors, we also understand that some application needs are unique.

HUBER+SUHNER offers custom-engineered solutions through innovative design, using state-of-the-art development tools. These powerful tools allow us to demonstrate product feasibility, including prototyping, in a short amount of time. Our in-house type testing capabilities will further prove the design through intensive verification tests according to MIL standards or your specific requirements.

Plating technology

We offer a broad range of different platings perfectly suited for your specific need. Besides the common gold and silver-platings, we have additional platings with superior performance:

- SUCOPRO – the gold plating of the future (minimizes gold-embrittlement)
- SUCOPLATE – the outdoor plating

Optimized connector/PCB solutions

Only by using an optimized footprint can the performance of the connectors be unleashed. HUBER+SUHNER offers optimized connector/board solutions:

- 3D field simulation
- Optimized footprints (incl. connector) as gerber files

Application engineering

HUBER+SUHNER has a team of specialists supporting your specific application. We have more than 25 years of experience within the industry and have successfully participated in many programs. Make use of our broad knowledge on connectors, cables, cable assemblies, and EMP's.

Product selection guides

Evaluate with our product finder

By using our "product finder" please choose the suitable cable, connector, adaptor, EMP, or antenna. You will find this utility on our homepage or with following link:

<http://products.hubersuhner.com>

Calculate with the assembly calculator

Define the suitable assembly by using the "RF assembly calculator". You will find this utility on our homepage or with following link:

<http://rfcablecalc.hubersuhner.com>

Attenuation of cable assemblies

Thermal influence

The attenuation shift occurring at temperatures other than the reference temperature (+20 °C or +25 °C) is attributed to the conductivity as the resistance of the inner conductor and screen changes. The relation for the temperature dependence of the electrical attenuation $\alpha(T)$ is given according to IEC 60096-0-1 by

$$\alpha(T) = \alpha_{293K} \cdot \sqrt{1 + \sigma_p \cdot \left(\frac{T}{K} - 293 \right)}$$

whereas σ_p is the temperature coefficient of resistivity and α_{293K} is the resistivity at the temperature of 239 K. The parameter σ_p is empirical and related to the conductor material and plating. This leads to the following formula:

$$a(T) = a_{25} \cdot (1 + K_T)$$

Phase stability of cable assemblies

Definition

The term "phase change" refers to a change in the absolute electrical length as a result of thermal or mechanical influences.

Thermal influence

The phase will change as a result of changes in the mechanical length and electrical characteristics of the dielectric when subjected to temperature variations.

Because of the special material used for the dielectric (low-density PTFE), the measurable phase change over temperature extremes is minimal.

Mechanical influence

Bending or torsion of an assembly will also cause a phase change. The change is directly proportional to the angle of bending or torsion.

Phase matching of cable assemblies

Definition

The term "phase matching" refers to the relative electrical length of an assembly compared with a reference cable or a given electrical length.

Availability

All SUCOFLEX 101P, 118 and 126 type microwave cable assemblies are available as phase-matched sets. Their outstanding thermal and mechanical phase stability makes them the ideal choice for applications requiring high stability. Any required matching values are available on request, although they are limited. The reproducibility of the electrical characteristics of the connectors in addition to thermal and mechanical influences limit the matching range attainable in practice to $\pm 0.2^\circ$ per GHz/m, equivalent to a mechanical length of ± 0.13 mm. In long assemblies, the thermal and mechanical influencing factors have a greater impact, resulting in a rise of the lower limit of matchability as the length increases (see graph above). In day-to-day practice, we find that it is better to speak of a specification window than of a tolerance. As a consequence, a statement such as "within 0.4° per GHz/m" makes more sense than " $\pm 0.2^\circ$ per GHz/m". This applies in particular to assembly sets consisting of more than two individual assemblies.

Guarantee of phase matching

HUBER+SUHNER guarantees phase matching ex-factory. The relevant measurement logs are included in the supply. It is essential during installation and service to ensure that all assemblies of a phase-matched set are exposed to the identical thermal and mechanical stresses.

Reference cables

Usually, a reference cable is produced for each phase-matched assembly set when an initial production run takes place. The absolute electrical length measured is internally saved. The reference cables are stored during 10 to 20 years under controlled conditions (temperature, humidity) together with the order data to allow individual assemblies to be replaced whenever the need arises.

Power handling capabilities of cable assemblies

Peak power

The maximum power is limited by the weakest component in the assembly. A distinction is made between two types of power transmission: peak power by pulses and continuous wave (CW) power.

In applications involving power peaks, the main phenomenon encountered is a breakdown as a result of high voltage. Cables, cable-to-connector transitions or connectors break down and are irreversibly damaged. The transitions between the cable and the connectors are the most sensitive areas of an assembly. The correct selection of cables and connectors and the careful assembly process ensure that no damage will occur during operation. Also the keying ratio must be taken into account as shown in the figure below.

CW power

A large number of factors determine the maximal continuous wave (cw) power that an assembly can transmit. A short discussion may help to make things clear. The most important factor in connection with cw power transmission is the generation of heat as a result of more power losses (attenuation) in the assembly.

Influence of attenuation

The lower the attenuation, the lower evidently also the heat generated inside the cable by power loss. In other words, "thicker" cables can handle a bigger power load, and this in turn means that the SF 106 is the SUCOFLEX cable with the "highest power performance".

The influence of connectors

Heat generation inside the connectors is determined by the diameter of the connector's inner conductor. As a general rule, it can be said that when the inner conductor of the connector roughly equals the inner conductor of the cable, also the surface temperature will be approximately the same. If a thinner connector is selected, the inner conductor of the connector will be heated more than that of the cable. The combination of SUCOFLEX 106 with SMA connectors may serve as an example.

Viewed from this aspect, connectors of type 7/16 or N have a considerably higher performance than connectors of type SMA.

Influence of the maximum temperature

In any event, the maximum power handling capacity is reached when the highest surface temperature in the assembly (measured anywhere on or in the assembly) has reached the maximal allowed value. For most cable types, the maximum temperature Tmax is 165°C. This temperature is determined by the materials used, such as PTFE and FEP, and by the MIL requirements regarding explosive atmospheres according to MIL-E-5400.

The temperature Tmax is in most cases reached next to or on the connector closest to the signal source.

Dissipation of heat generated

With a given cw power, the assembly reaches the maximum temperature at a given power level after about thirty minutes.

This maximum temperature is influenced, in addition to the above-mentioned parameters, also by numerous ambient influences such as ambient temperature, type of installation and altitude of application.

The more capable the assembly is of dissipating the heat by unobstructed convection and radiation at a low ambient temperature and a low altitude of application, the higher its maximum power handling capacity will be. Of the two types of heat dissipation – convection and radiation – convection is normally the more effective. At high altitudes with low air pressure it is the other way round. Cables with a larger surface dissipate heat more easily to their surroundings and therefore have a higher power handling capacity.

Influences of ambient temperature and operating altitude

As mentioned above, the ambient temperature and altitude of application determine the maximum power handling capacity to a crucial extent.

It is calculated for a cable in the following way:

$$P_{\max} = P_{\max,0} \cdot K_R \cdot K_T \cdot K_A \cdot K_f$$

$P_{\max,0}$ is shown in the corresponding cable curves. The VSWR-dependent parameter K_R , the altitude-dependent parameter K_T and the frequency dependent parameter K_f are defined as follows (acc. IEC 60096-0-1):

$$K_R = \frac{(VSWR + 1)^2}{4 \cdot (VSWR)^2}$$

$$K_T = 1 - \left(\frac{T - 40^\circ\text{C}}{T_{\max} - 40^\circ\text{C}} \right)^{0.8}$$

$$K_f = \frac{1}{\sqrt{f}}$$

The factor K_A strongly depends on the emissivity of the jacket material of the cable, i.e. the capability to dissipate heat by radiation.

Correction factors K_A and K_T

Note:
All specifications are approximate values. In edge cases or critical applications, please contact your HUBER+SUHNER distributor.

Further catalogues

All our catalogues are updated regularly. They are available in electronic format and can be accessed from our main HUBER+SUHNER homepage.

Simply go to the "Downloads" section and select "Radio Frequency" and "Catalogues" to filter down your search.
