3 Description

To ensure the uniqueness of the product serial number, we are adding one additional digit to the serial number of the affected LEA modules listed in Section 1. At the same time, we are updating the format of the manufacturing year/week information field from Y/WW to YY/WW.

Example of an old label with an 11-digit serial number and Y/WW (1/44):

Example of a new label with a 12-digit serial number and YY/WW (21/44):

4 Schedule

Estimated first shipment date¹ will be 2022 calendar week 2.

5 Customer impact and recommended action

No customer impact is expected.

¹ The estimated first shipment date is the forecasted date when a customer may expect to receive the changed product. This is determined by the estimated date of inventory depletion on the IN issue date. This may be affected by fluctuations in supply and demand. Consequently, although customers should be prepared to receive the changed product on this date, u-blox will continue to ship the pre-changed product until the inventory has been depleted. This may result in the pre-changed product being shipped to customers after this forecasted date.
